

Crescendo Version 3.0 for Internet Explorer

Installation of Crescendo version 3.0 for Internet Explorer is complete.

Now you're ready for music surfing the web, including visiting the winners of the Cool Crescendo Site of the Day awards at <http://www.liveupdate.com/sod.html>!

Authoring Information

If you are a web page author, make sure you put the control panel or some kind of link back to the Crescendo web site (<http://www.liveupdate.com/crescendo.html>) on your site, so you viewers can also be listeners. A good line of text to go with this link is "This site best heard with..."

Additional important authoring information is on <http://www.liveupdate.com/embed.html>.

Uninstalling Crescendo

Crescendo can be permanently uninstalled using the "Add/Remove Programs" utility in the Windows 95 or Windows NT 4.0 control panel. If you are using Windows NT 3.51, refer to <http://www.liveupdate.com/tshootcr.html> for manual uninstallation instructions.

Thank you for using Crescendo, and "Spread the Music!"

the LiveUpdate team
