QuickScrap
v1.x

The algorithm is as follows:
CODE = <num1>-<num2>-<num3>
(CODE must be >=7 characters long so padding with zeros may be necessary)
where:
 $\text{num1} = \text{numCopies} * 13; (\text{numCopies} \geq 1)$

num2 = numCopies*nameLength (nameLength >= 1)
num3 = Sum of ASCII characters in name
For example: 10 copies registered to John Doe
num1 = 10*13 = 130
num2 = 10*8 = 80 (nameLength of John Doe = 8)
num3 = 711 (J=74, o=111, h=104, n=110, Space=32, D=68, o=111, e=101)
So, the serial number is: 130-80-711
