**What is a QuickTime movie ?**

A QuickTime movie is a file that can contain video images, animation and sound.

Movies that contain video or animation are made up of a series of still images played in succession. Each image is called a frame.

Many programs let you play QuickTime movies in ordinary documents, such as word-processing files, spreadsheets, and presentations.

**Use Movie Player to Open and play QuickTime movies.**

You can play QuickTime movies from your hard disk or from a CD-ROM disc. Movies on floppy disks should be copied to your hard disk before you play them.

## <sup>\*<sub>52</sub></sup> <sup>#<sub>53</sub></sup> <sup>\$<sub>54</sub></sup> <sup>K<sub>55</sub></sup> <sup>+<sub>56</sub></sup> **Setting QuickTime movie options**

The movie options allow you to control how a movie looks when it is embedded in an OLE [destination document](#). You can reach the Options dialog box from either of two locations:

- In Movie Player, select "Options" from the Edit menu.
- In the destination document, select "QuickTime Movie Options" from the Edit menu.

{bmc PLOPTENU.BMP}

You can set options to show the control bar, play the selection only, put a frame around the movie, and use the movie palette. You can also set Looping and Size options.

Use the Frame To Copy options to control which frame represents the movie in the destination document.

- To use the poster, select Poster.
- To use the current frame, select Current.
- To place the movie into the destination document at the selected size, leave Paste Icon unchecked.
- To place the movie into the destination document as an icon, check Paste Icon.  
When the movie icon is double-clicked, the movie plays in a stand-alone window.

Use the Save As default button to save a complete set of options as your defaults.

Use the Restore To Default button to restore to your last set of defaults.

<sup>75</sup>\$ destination document

## #76 \$77 K78 +79 **About Object Linking and Embedding (OLE)**

OLE is a technology that allows you to place "objects" (such as movies, pictures, or spreadsheets) into other documents. For example, you can use OLE to embed a QuickTime movie into a word-processing document.

Readers of your document can double-click the movie to view it just as if they were using Movie Player. OLE also allows you to edit the embedded movie from the [destination document](#).

Your Windows user's guide has more information on using OLE. See the chapter that covers integrating your Windows applications.

## <sup>#80</sup> <sup>\$81</sup> <sup>K82</sup> <sup>+83</sup> Documents that accept QuickTime movies

You can embed a QuickTime movie into a document created by an OLE [client application](#). Some client applications are:

Microsoft Excel 4.0

Microsoft Word for Windows 2.0

WordPerfect 5.2

Microsoft Windows 3.1 Write

Microsoft Multimedia Works for Windows

To find out if an application is an OLE client application, check its user's guide for information on Object Linking and Embedding.

## <sup>#86</sup> <sup>\$87</sup> <sup>K88</sup> <sup>+89</sup> **Embedding a QuickTime movie**

You should follow the detailed instructions for embedding objects in the [client application](#) user's guide. Here is an overview:

1. In the [destination document](#), put the cursor where you want to insert the movie.
2. Choose "Insert Object" from the Insert or Edit menu.
3. In the dialog box, select "QuickTime movie" as the object type. Movie Player opens, and the File Open dialog box appears.
4. Use the dialog box to find and open the movie you want to insert.
5. To set how the embedded movie will look in the destination document, choose "Options" from the Edit menu. See the help topic [Setting QuickTime movie options](#) for more information on setting display options.
6. Choose "Close" from the File menu to close the movie. A message asks if you want to update the document before proceeding.
7. Click Yes to embed the movie and return to the destination document.

### [Glossary](#)

## #<sup>90</sup> \$<sup>91</sup> K<sup>92</sup> +<sup>93</sup> **Editing an embedded movie**

You should follow the detailed instructions for editing embedded objects in the [client application](#) user's guide. The steps below provide an overview.

When you edit an embedded movie, only the movie in the [destination document](#) changes. The original movie does not change.

1. In the destination document, click the movie once to select it.
2. Choose "QuickTime movie object" from the Edit menu. Movie Player opens. The movie may open automatically, or you may have to open it.
3. In Movie Player, choose "Options" from the Edit menu.
4. Make your changes in the Options dialog box. See the help topic [Setting QuickTime movie options](#) for more information on setting display options.
5. When you finish, choose "Close" from the File menu to close the movie. A message asks if you want to update the document before proceeding.
6. Click Yes to update and return to the destination document.
