

Lists

There are three different list styles. All of them can include new lists.

- unordered list
- 2. ordered list
- definition list
- text, text, text

Unordered list

`<UL [TYPE=DISC|CIRCLE|SQUARE]>`

Stands for 'unordered list'. Starts a new unordered list. The bullet (•) can be changed with TYPE, between DISC (•), CIRCLE (°) and SQUARE (€). Must end with ``

`<LI [TYPE=DISC|CIRCLE|SQUARE]>`

Stands for 'list insert'. Starts a new line. Use it inside a `` text. Must end with ``

Ordered list

`<OL [TYPE=A|a|I|i] [START=n]>`

Start a new ordered list in the same way as ``. TYPE changes the numbers in the front of the entries between A,B,C (A), a,b,c (a), I,II,III (I), i,ii,iii (i) and 1,2,3 (only ``). START starts the numeration at n. Must end with ``

`<LI [TYPE=A|a|I|i]>`

Stands for 'list insert'. Works in the same way as in an unordered list. Must end with ``

Definition list

`<DL>`

Starts a defined list. Must end with `</DL>`

`<DT>`

Stands for 'defined tag'. Insert a new 'header' in the list. The text shows up in bold. Must end with `</DT>`

`<DD>`

Use it to display normal text in a new line inside the list.
Must end with `</DD>`

Menu list

There is also two other tag which looks the same as a list. This is often used in ftp-pages, but isn't supported in all browsers.

`<MENU [DINGBAT=text] [CLEAR=align]>`

Start the new menu list. DINGBAT is the name of an icon which will start the line. Can be "text.document", a icon of a small text file, "no" which is no dingbat at all or about 30 others.

Directory list

`<DIR>`

About the same use as ``. Must end with `</DIR>`.

``

Start tag for a new list item inside the directory list.
Must end with ``.
