

### To install VCalc V2.5 on your computer:

(For help with these steps, see the Windows manual and/or DOS manual)

- 1) Create a new directory for VCalc.
- 2) Copy all of VCalc's files into the new directory just created. The files required are:

**COMMDLG.DLL**  
**GSWDLL.DLL**  
**MSAFINX.DLL**  
**GSW.EXE**  
**VCALC24.EXE**  
**VCALCG24.EXE**  
**VCALC24.HLP**  
**CMDIALOG.VBX**  
**GRAPH.VBX**  
**THREED.VBX**  
**TRUEGRID.VBX**  
**INSTALLV.WRI**  
**FILE\_ID.DIZ**

- 3) Add "VCALC24.EXE" as a new program item
- 4) Make sure that the file, "VBRUN300.DLL" exists on your computer. It should be located in either the "WINDOWS/SYSTEM" directory, or else in the same directory as VCalc. If it can't be found, then can be download it from most any on-line service.
- 5) That should do it!

**If upgrading from V1.1**, then merely copy all of the V2.5 files over the V1.1 files. This will not affect the data files. After completing the installation, and starting up V2.4, read the help file under "Advanced Setup", for information on how to import your V1.1 data files.
