

# CHILDREN'S SRI

Hangman Plus v4.0

by Ken Winograd

This great hangman game has a variety of options. There are almost 40 different categories, including animals, islands and vice presidents. You can even add your own words. Customize the game anywhere from six to 12 wrong guesses each game.

My First Mouse v1.0

by StoneWare Software

This is a simple program designed for very young children to become familiar with the mouse. When the mouse is moved over the colored shape on the screen, a sound will play and the shape will change color. When the mouse button is clicked over the shape, another sound will play and the shape will change. This is a good way for children to associate the movement of the mouse with the movement of the cursor on the screen.

Xearth for Mac v0.9

by Johan Lindvall

View Earth with this unique program. Display a rendered image of Earth from any point of view. You can set the longitude and latitude, time of day, sun position, orbital view and even star patterns. Added features include labeling cities on the globe, shading and showing the longitude/latitude grid. Great for learning geography!

NOTE: This version runs on the Power Macintosh.
