Burbank v2.0

by Kelly Burgess

View four clocks in different time zones simultaneously. Set each clock for any city you want. The clocks display analog or digital times, the date and night or day. Customize the display — change fonts and colors of each clock individually or together. There is also an alarm and hourly chime.

Diet Master v1.0.1

by JP Software

Analyze your daily intake of fat, protein, carbohydrates and more. This program contains a database of more than 5,000 food items. Choose items from the food list that you eat and compute a daily report. Your total intake of many important nutrients is shown along with a pie chart. Use it to plan your diet or analyze foods you have already eaten.

EzHTML v1.2

by Benjamin Morrell

You'll hang ten as you surf the net with your own Web page. Create World Wide Web pages with this easy-to-use HTML editor. Pick type styles from the menu or the tool bar and the appropriate HTML code is added to your document. Create unordered, ordered and definition lists.

MAC n TV v2.0

by Bill Bouch

Organize your QuickTime movies with this previewer/viewer. You won't have to go hunting for your movies, loading and unloading them, trying to remember what they look like. This program collects all of your QuickTime movies into one small file. All movies in your collection are shown as previews at the bottom of the screen. Click on one and the movie is instantly opened and played.

PhoneCodes/TimeZones v3.2

by Michael Ross

What's the area code of Chicago? What do you dial to call England? This program contains listings of every U.S. area code and many international numbers. The list also includes city, state and time zones. Search for any number or city name. You also get a listing of postal abbreviations for American states.

SignatureQuote v1.0

by Semicolon Software

Attach a signature or quote to e-mail messages and other documents with this utility. Store two

different quotes the Clipboard, split paragraphs into lines of text separated by carriage returns and paste special characters to the beginning and end of lines. A great personal touch to any e-mail transmission.
