## Gauge Series of Tools by Newer Technologies

These four programs are designed to give you important information about your computer, including hardware configuration and performance.

Clockometer displays your processor and clock speed (in megahertz). Cache-22 displays whether or not your computer has Level 2 Cache — and if so, how much. SCSI Info scans your SCSI bus and displays all connected devices. Slot Info scans your Macintosh computer's internal slots and displays information about any cards attached to them.

## HTML Viewer by Sassafras Software

A must-have program for Web page authors! Preview your HTML documents without the overhead of an expensive browser, like Netscape or Mosaic. Make bookmarks for commonly-used files. Test your forms without setting up an HTTP server with this program's form support. It also supports GIF graphics and the new PNG format.

## MacBaseball v1.1 by Roberto Bellizzi

Play ball! Keep track of baseball scores and statistics using this comprehensive program. Pick the teams from the team data screen and record the line-up. The data entry screen is arranged by inning and records information, including hits, errors and runs. Other features include complete batting statistics for each player and inning. Includes tutorial files to get you started.
