- eference to the stroke order rules
- rint basic Kana

(Application by Rose Corp.)

LifeLab 3.1

It's alive

Monitor and study cell growth with this biology program. Investigate two-dimensional cellular automata. Track cell creation with real time animation of cell growth. Perfect for beginning and advanced biology students.

- tudy the life cycle of cells
- Examples included

(Application by Andrew Trevorow)

Molecular Dynamics 1.0

Atomic simulator

Learn to understand molecules with this scientific program. It simulates an atom's particle movement based on user-defined conditions, including particle size, control density and pressure.

- reat for those studying Chemistry and Physics
- isplay particle positions in real time
- earn physics concepts

(Application by Paul D. Beale)

Planet C 6.1

Out of this world

Quickly calculate the coordinates of planets and other heavenly bodies visible to the naked eye, including Mercury, Venus, Jupiter, Saturn, and the sun and moon. This program is a must for keen astronomers.

- hoose from three different coordinate systems
- alculate the magnitude of the planets
- nvestigate eclipses

(Application by Lars Glisen)
