Airport IDs v1.21

by Robert Swanson

Take off with this airport identification program. Locate airport codes two ways: by entering the code to get the airport name or enter the airport name to get the code. Contains listings for more than 2,500 airports.

Biorhythms v5.1c

by Andrew Regan

Your mind, body and emotions are governed by three natural cycles, known as biorhythms. This program allows you to check your biorhythms, chart them and even print a record. Compare the biorhythms for two people to determine how compatible they are. It also interprets your biorhythm for you, so you'll always know what to expect for any given day.

CheckBook v2.0

by Peter Marks

Balance your check book and other accounts with CheckBook! It lists of account transactions and computes your current balance. It's easy to use, has a standard Macintosh interface and lots of command key commands. You can even script it with AppleScript!

HTML 101

by George Brothers

This file is all you need to get started in HTML programming. It contains information about how to script your Web page using basic HyperText Markup Language (HTML) commands. It also includes five drills to get you going and a sample HTML file that incorporates all of the drills.

The DiskTools Collection

by Evan Gross

Get organized with this collection of utilities. The file management tool allows you to copy, rename or delete files. The Phone Pad is a 1,000-page notebook with search features. The Calendar lets you take notes and print them. Its RPN and Scientific calculators expand the features of the standard Apple calculator. Invaluable tools you need to run your business smoothly!
