

Making cross platform projectors

Using Director MX 2004, it is possible to make Mac projectors under Windows. To do this, you need to place flattened copies of the Mac xtra (included in this folder) into the *Director MX 2004\Configuration\Cross Platform Resources\Macintosh\Xtras* folder.

Then you need to change the *xtrainfo.txt* file in the *Director MX 2004\Configuration* folder. Add this line to the end of the file.

```
[#namePPC:"Buddy API OSX Xtra", #nameW32:"budapi.x32"]
```
