

About

Death 'n Destruction: Version 4.0

This program was created by "Black Sol"

<http://www.hack101.com>

Member of Wiltered Fire

<http://www.wilter.com/wf>

I consider this freeware - you may upload it to any website, BBS, FTP site, etc. The only restrictions I ask are -

Do not modify ANY of the readme's or any other files,
and DO NOT charge money for this program.

Thanks for TeleSaurus for a list of updated smtp servers; E-HACK, the head of Wiltered Fire, and the other wf members of course; Perhillion who was testing this from the very starting sucky versions; Fucking Hostile and then Darkling. you know why :P
1997.

Disclaimer

This program was made as an exercise in the authors programming. It in no way condones or promotes internet terrorism or illegal acts. If used in a malicious manner, this program could cause very illegal activities and destructive activities; towards yourself and others. It is your choice, your better judgement to decide how you deal with this. If you use it in a malicious manner then I cannot be held responsible - it is your harddrive and your responsibility. If the feds bang down your door at 2am - remember - the blame is all yours to take.

Windows 95 or NT

8mb Ram (16mb recommended)

Internet with ppp/slip connection

14.4bps modem (28.8 recommended)

aprox. 2mb hard drive space

An IQ above your age.

Commands

Functions and Controls

Settings Panel:

SMTP Host - This is the host to bounce the mail off of.

Use any in the dropdown list and if it doesn't work then try a different one. This can be any host that you even use on the web like www.whatever.com, just take off the www.

Randomly Change Option - If this is checked, then after each message is sent, it will randomly change the SMTP server to use. You can edit the list of servers by hitting Edit Server List(duh). I recommend using this option for various reasons but make sure to update the server list frequently..

Spoof Host - This is a fake host that will be used when sending the mail. This can be any word. Please try to keep the word short and only one word.

of messages to send - How many emails to bomb the person with.

Never ending bomb - Keeps sending bombs and doesn't stop.

Bomb Panel:

Send bomb to: - The email address to bomb.

Say Bomb is from: - The email bombs will appear to be from the email address you put in this box. It does not have to be a real email address.

CC: - Send the bomb to a second person at once.

BCC: - Send the bomb to three people at once.

Message Subject: - Self Explanatory.

Message Body: - Self Explanatory.

Send bomb: - Start sending the bomb.

Abort - Stops the bomb.

Clear - Clears the boxes.

Edit Headers - Edit the info going into the mail headers.

Status - The progress of the bomb.

Clone - This will load up clones and allow you to multiply the damage of the bomb.

SMTP Spy - This allows you to look on at the commands the server tells you when the bomb is sending.

Random - This generates random words and puts them into the subject/message. Edit the wordlist by going to

File-->Edit Random Wordlist

Frequently Asked Questions

Q: What is an email bomber?

A: An email bomber sends a large amount of email messages to someone...if enough messages are sent it can cripple their ability to receive email, slow down their internet connection greatly while their isp is trying to handle all the mail, and even crash their isp, in which the president of the company will be greatly pissed at the person and kick them off most likely.

Q: I don't have the files I need to run the bomber!

A: Go to http://www.softseek.com/Utilities/VBRUN_Files/ you will be able to find the necessary files.

Q: Do you have a website?

A: Yes. its <http://www.hack101.com>

Q: What do you think will be in the next version?

A: The next version will hopefully include File Attachments and the function to subscribe people to mailing lists.

Q: What is saving and opening a session?

A: By saving a session, it saves all the information about your current email bomb and stores it in a file. When you open that session, it loads the info from the file, and puts it all back, so all the boxes are filled in how you left it and you don't have to go back and redo everything.

Q: Can I have the password for custom headers?

A: SHUT UP i'm not giving the pword out, that eliminates the purpose of having one!

Q: What are clones? Should I use them?

A: Clones simply open up another bomber. This is basically so you can greatly increase the number of bombs going to the person. So if you loaded 4 clones, you could email bomb the same person 5 times at once, greatly increasing the damage.

Q: What is Editing the header information?

A: This changes and adds things to the mail headers, making them harder to trace, which makes it harder for you to get caught. USE THIS.

Q: Can i be caught?

A: If the person is a real hacker and knows his shit,

he may be able to track the header to you. In which case yes you can get caught. Being caught can result in a lot of trouble so be careful.

Q: Do I need Windows 95?

A: Yes, you do.

Q: How many messages should I send? Or should I use never ending?

A: The more messages you send the bigger and better the bomb, so that's up to you. Never Ending is for serious damage, so do whatever you want to do.

Q: Can I have the code for this? I want to make my own bomber.

A: Screw you. You aren't getting my code.

Q: How can I test if a server is anonymous?

A: Send ONE or two email messages to yourself using that server. Search the header and see if you can find your name or IP in the FROM: or Received From: part.

Q: The mail messages aren't arriving, I don't think it worked.

A: If everything ran smoothly, just wait. Most times the mail server isn't as fast as you'd like it to be. Receiving the mail messages may take a little time so be patient.

Q: This isn't working..it gives me "No DNS Entry" or some error message when I hit the button..

A: If you are using AOL, then that's your problem. You can only use this bomber with AOL 3.0 for Windows '95 and other PPP/SLIP based ISPs. In short, if you're using AOL and it's an older version than 3.0 for Win '95 then just delete the bomber..it won't work.

Also, if you aren't using AOL, then you may not be signed online or your net connection may be messed up. Try disconnecting and re-connecting.

Q: How much wood could a woodchuck chuck if a woodchuck could chuck wood?

A: Approximately 3.47 lbs.

Q: This program is in Visual Basic, does this mean you aren't a real coder?

A: It doesn't matter what language a program is written in as long as it works. And on a side note; I have been programming for no more than a year, and I am learning: Delphi,

Pascal, and C++ in the very near future.

Q: How can i get more help?

A: Email me at Black_Sol_6@hotmail.com

Other Tools

'Other Tools', as seen in the toolbar, are an assortment of extra tools besides the standard e-mail bomber.

Mailing Lists: This will subscribe a person to a mailing list of your choice. Meaning they get tons of mail because they're now a part of that list. Best thing is it won't get traced back to you.

Random Pword Generator: This generates a string of letters or numbers, for the use of creating a password that people most likely won't guess and wordlists won't crack.

The rest of the tools should be self explanatory; basically if you don't know what they do already then ya shouldn't be using them :P

Trouble Shooting

Problem: I don't have the right files for this!

Solution: go to http://www.softseek.com/Utilities/VBRUN_Files/

Problem: When I open, or minimize and then restore the bomber, the panel on top is all grey with no icons.

Solution: Try minimizing and maximizing it once or twice. It usually refreshes the icons and words.

Problem: When I mail bomb, it says "No DNS entry" or "Server not found"

Solution: You're using an invalid SMTP host. try another one from the pre-made dropdown box.

If it still doesn't work, check your internet connection. You might not be connected to the internet; or you may not have a true PPP connection.

Problem: The status window doesn't go away when the bomb is finished!

Solution: it's not supposed to. don't worry, the next time you bomb, it will reset itself.

Problem: When I open SMTP Spy while bombing it says 'command unrecognized' alot.

Solution: ignore that, I don't even know why it says that but it ain't important.

Problem: I got caught email bombing and my internet provider terminated my account!

Solution: You should've read the [Disclaimer](#).

Problem: My parents said email bombers are bad and to delete it.

Solution: You're a pansy. Do you do everything your parents tell you to?

Whats New

Whats new in this version:

- Mailing Lists added. Subscribe your enemy to mailing lists instead of wasting your time bombing him! This puts someones email address onto a discussion forum type thing so they get tons of mail from them.
- Option to Randomly Change who the bomb is from. If this option is checked then after each email the address who it says the bomb is from will change. You can edit this list of names by clicking the button next to it.
- Randomly Change message subject. Does the same thing as randomly changing the From: address except in each message it uses a different subject line.
- Randomly change mail host. Same thing as above, except for each message it uses a different random smtp host to use.
- GUI for clones has been slightly modified.
