

- The Converter includes all audio tracks in the converted file. The default track will be placed first in the converted file so that Media Player will play this track.
- For best quality, capture video using a lossless compression scheme, such as the ANIMATION, GRAPHICS, Microsoft RLE, or NONE compressors. Compress the video only once when using lossy compressors such as the various video compressors.
- Custom data tracks are ignored by the Converter.
- If the Converter runs out of memory, increase its Minimum and Preferred Size values in the Finder's Get Info window.
