Announcing TeleNavigator, the first integrated desktop communications environment for the Macintosh. TeleNavigator provides you with a suite of communications tools to enhance collaboration and productivity through its seamless integration of electronic mail, voice messaging, data communications, and desktop telephony, eliminating the need for purchasing and learning several different applications.

Through the Macintosh Telephony Architecture, TeleNavigator provides you with a full-duplex speakerphone and telephone keypad which can be used to place and receive calls. In addition, TeleNavigator provides you with a voice messaging system to answer the phone for you, saving the messages in your PowerTalk mailbox.

Electronic mail with TeleNavigator is handled by the PowerTalk mail interface, providing you with a familiar mail system which can communicate with many different mail protocols through the use of MSAMs. Integration of mail and telephony is provided with TeleNavigator, enabling you to retrieve your electronic mail as spoken text over the telephone.

Data communications are provided through the Communications Toolbox, enabling simple configuration and connection with online services. Also provided is automatic translation and decompression of transferred files.

Video conferencing features in TeleNavigator are provided through QuickTime Conferencing system software, providing you with seamless videophone capabilites.

Personal communication has never been easier. TeleNavigator provides you with the simplest, most effective means of communicating and collaborating with others.

Available in Summer 1995 for an introductory price of $99.95
