InControl Tools 95 features

InControl Tools 95 provides a set of easy-access display and desktop utilities that help you maintain a picture perfect environment for work or pleasure.

With InControl Tools 95 you can:

- Use a popup menu to instantly switch desktop and viewport resolutions and zoom in and out on your viewport.
- Center windows and message boxes to the viewport or desktop.
- Control other display management features--screen saver, fast scroll, pan lock, even your hot keys and popup menus--with menu on/off switches.
- Adjust your system's audio volume with a handy popup slider bar.
- Add or remove items from your left- or right-button popup menus.

Enjoy. And don't forget to [let us know what you think](#).

Using the Setup Wizard

The Setup Wizard guides you through the complete InControl Tools customization process.

It is run when you install InControl Tools for the first time, but you can run it again any time by clicking the InControl Tools tray icon and choosing Setup Wizard.

Selecting the Setup Wizard from the tray icon

To use the Setup Wizard now,  click this button.

Walking with the Wizard

Setup Wizard screens explain each step of the customization process. During each step, the Display Properties dialog opens to the appropriate property sheet.

As the Wizard explains each control, the control blinks and is highlighted on the property sheet. You can then make any changes to the control, as explained by the Wizard.

At any time you can move to the Next step, go Back, or Cancel the process.

{button ,AL(^wizards')} Related topics

The Monitor Wizard

If your monitor is not on the list of standard Monitor types for Windows 95, you can use the Monitor Wizard to help you determine the capabilities of your monitor. To use the Monitor Wizard, you will want to bring up the list of monitor manufacturers and models, and then select the "(User Defined monitor types)" Manufacturer and the "User defined monitor(InControl Tools 95)" model.

The results of the tests run by the Monitor Wizard are used by InControl Tools for dynamic Desktop and Viewport switching features.

Using the Wizard

If you have your monitor manual handy, you can use it to select the recommended refresh rates while Monitor Wizard runs. We recommend that you only choose "Yes" to the Wizard's inquiries when they match the settings recommended by your monitor manual.

Choosing a test series

The Monitor Wizard offers three ways to test your monitor:

- **Minimal** automatically runs a series of tests in all modes at a minimal refresh rate of 60Hz. This selection is appropriate for low-end monitors or if previous attempts at determining capabilities using the Full or Custom modes failed.
- **Full** automatically runs a series of tests in all modes and at all available refresh rates. This selection is appropriate for high-end monitors that have a wide range of known capabilities.
- **Custom** lets you choose what modes and refresh rates to test. This selection is appropriate when your monitor manual states the exact capabilities and limits for your display.

After choosing a test series type, the Monitor Wizard moves to a final pre-testing screen where existing capabilities (from previous tests) are listed.

If you chose Custom testing, you can use check boxes to select modes and refresh rates to test, or clear any existing test modes before clicking the Begin Testing button.

If you chose Minimal or Full testing and no existing capabilities are listed, Begin Testing proceeds to run the complete test as ordered. If existing capabilities are listed, you can either clear them all and proceed with full retesting by clicking the Begin Testing button, or retest existing capabilities.

As each test setting is displayed, a brief message appears to ask if the current display appears normal. If it does (or if you know from your manual that your monitor supports the setting), click Yes. If the display is abnormal or unstable in any way, or if you know from your manual that your monitor does not support the setting, either click No or wait a few seconds for the screen to readjust.

When Monitor Wizard completes the tests, the confirmed capabilities are listed.

After running the Monitor Wizard, we recommend that you restart your computer to confirm that the confirmed default (optimal) mode works. You should then use InControl Tools' Display and Viewport switching features to check other available combinations.

Note: If you change monitors and your new monitor is not on the list of Windows95 standard displays (that is, if it isn't listed in the "Change Display Type" list in the Display Properties dialog), you can rerun the Monitor Wizard to set up the new monitor to work with InControl Tools. The wizard is stored in your Diamond/InControl Tools 95 installation directory. Its file name is DMMONWIZ.EXE.

Switching to the User Defined Monitor type

Before continuing with the Monitor Wizard, you need to switch to Windows' User Defined Monitor type.

Here's how to make the switch:

- 1 Click your right mouse button anywhere on the Windows background. The Windows desktop menu appears.
- 2 Choose Properties. The Display Properties dialog appears. (Shortcut: Click the button at the top of this topic.)
- 3 Click the Settings tab.
- 4 Click the Change Display Type button. The Advanced Display Properties dialog appears.
- 5 Click the Change button. The Select Device dialog appears.
- 6 Choose the Show All Devices radio button at the bottom of the dialog.
- 7 Scroll through the Manufacturers list until you see User Defined Monitor, then select that item.
- 8 Click OK to dismiss the Show All Devices dialog, then Apply in the Advanced Display Properties dialog, and Apply in the Display Properties dialog.

You can now proceed with the Monitor Wizard.

Quick start instructions

When you install InControl Tools 95, a tray icon is added to your Windows95 desktop and several new options are added to your Display Properties dialog.

Many of the new features available to you are activated immediately after installing InControl Tools and restarting Windows. You can then modify or toggle any feature on or off, either through the Display Properties dialog or directly from your enhanced desktop (right button) menu.

To start using InControl Tools immediately after installation and restart:

- ▶ Click your right mouse button on the Windows desktop. Your enhanced desktop menu appears. Note that this is the same Windows95 "right-click" menu that normally appears, but with several new items listed above the standard items. These new items are your InControl Tools enhancements. Check all features and submenus to review the default settings.
- ▶ Click your left mouse button on the Windows desktop. Your popup start menu appears. Note that this is the same menu that appears when you click the Start menu. Now, however, it's also available as a "floating" popup menu.
- ▶ Click here or click the button at the top of this topic to open the Display Properties dialog. If you're familiar with the dialog, you'll note that it now contains new property sheets ("tabs"). The new sheets--Popup Menus, Shortcuts and Information--are added by InControl Tools. Also note that the Settings property sheet contains advanced display area and viewport area options.

You're now ready to use or customize all of these new features (such as adding hot key shortcuts).

For detailed customization instructions, click here or click the button below.

▪ **How to assign InControl features to hot keys**

(If the Display Properties dialog is already open, go to step 3)

- 1 Click your right mouse button anywhere on the Windows background. The Windows desktop menu appears.
- 2 Choose Properties. The Display Properties dialog appears. (Shortcut: Click the button at the top of this topic.)
- 3 Click the Shortcuts tab.
- 4 Click the arrow on the Shortcut action box to see a dropdown list of available InControl features.
- 5 Click the name of the feature you want to assign to a hot key.
- 6 Click the Shortcut key box (so that the cursor appears in it).
- 7 Press the key or key combination you want to use to activate the feature. For example, if you want the feature to be activated whenever you press the Ctrl, Alt and X keys at the same time, press all of those keys now. When you do, the combination appears in the Shortcut key box. At the same time, the binding, or assignment, appears in the Shortcut bindings list above.
Add any other assignments now. If you change your mind on any of them, just select the binding you want to remove from the Shortcut bindings list, then click Remove binding.
- 8 If you're finished making changes, click Apply, then OK to close the Display Properties dialog. If you want to make other changes, click the button below for a list of other instruction sets.

- **The popup start menu**

The popup start menu is an InControl Tools option that lets you open a menu when you click your left mouse button on the Windows background. It's the same menu you see when you click the Start button on the Windows95 taskbar. The menu is enabled when InControl Tools is installed. After installation it can be switched off and on any time. For start menu access and customization instructions, [click here](#).

To toggle the popup start menu on or off:

- Open the enhanced desktop menu by clicking your right mouse button on the Windows background, then choose Start menu.

or

- Click the Start menu check box in the Display Properties dialog. If the box is checked, the menu is on; if cleared, the menu is off. Be sure to click Apply or OK before closing the dialog.

Note: Even if you currently have the popup start menu switched on, it is automatically turned off if you close the InControl Tools tray icon. It is restored to its previous state when you run the InControl Tools Video Applet or restart Windows.

{button ,AL(^popups;hotkeys;solutions')} Related topics

- **The enhanced desktop menu**

The enhanced desktop menu is an InControl Tools option that adds a number of items to Windows' built-in "right-click menu." This menu normally appears when you click your right mouse button on the Windows background. For enhanced desktop menu customization instructions, [click here](#).

For descriptions of menu items, [click here](#).

The menu is enabled when InControl Tools is installed. After installation it can be switched off and on any time.

To toggle the enhanced desktop menu on or off:

- Open the enhanced desktop menu by clicking your right mouse button on the Windows background, then choose Popup Menu.

or

- Click the Right Mouse Button Popup menu check box in the Display Properties dialog. If the box is checked, the menu is on; if cleared, the menu is off. Be sure to click Apply or OK before closing the dialog.

Note: Even if you currently have the enhanced desktop menu switched on, it is automatically turned off if you close the InControl Tools tray icon. It is restored to its previous state when you run the InControl Tools Video Applet or restart Windows.

{button ,AL(^popups;hotkeys;solutions')} Related topics

- **About hot keys**

InControl hot keys let you assign key combinations to tasks in Windows95. You can then press these combinations any time from anywhere in Windows to open programs, open documents, or perform InControl display management tasks.

No hot keys are assigned when InControl Tools is installed. For step-by-step instructions in assigning hot keys, [click here](#).

{button ,AL('howto')} Related topics

- **Solutions**

After installing InControl Tools and Windows restarts, Windows tells me that I should run a check for new hardware. But I didn't change my hardware, so why does it ask?

InControl Tools installs a new Windows95 display driver. In most cases, the new driver is part of a new display card installation package. In either case, Windows senses a change in the display environment, and asks you if you want to check for new hardware.

If you did install a new card when you installed InControl Tools, you should follow the hardware-check procedure when the query appears. If you only installed or reinstalled the InControl Tools software, you don't have to do the hardware check.

Note: If you had a higher resolution display setup before installing the software, you will probably want to restore your screen to its previous settings when Windows restarts (it restarts to the default VGA 640 X 480, 16-color state). To do that, open go to your Control Panel window, click on the Display applet to open the Display Properties dialog, choose the Settings tab, and make your selections.

I changed display cards, installed the new driver for the new card, and now InControl Tools doesn't work.

Why?

InControl Tools works only with certain Windows95-compatible Diamond drivers. If you install an unsupported driver, your Display Properties dialog in Control Panel reverts to its default state and all InControl Tools features are removed.

[Click here for help](#) if any of the links don't connect properly.

Tip: If you use an Internet service provider, you can use Windows95's AutoDial feature to open access to your dial-up service.

Connecting to the Internet from Help

Use the following troubleshooting checklist if you click on one of our Help-to-Internet links and the link fails or your browser doesn't appear.

Is your Internet connection running right now?

Make sure your company or personal Internet service is online right now. Open your web browser and type www.diamond.com into the URL locator at the top. If you get "URL not found" error message (or a message to that effect), then you're probably not online. If that's the case, check with your system administrator or connect to your Internet service provider and try again.

Is Microsoft Internet Explorer installed?

Windows95 offers a special feature that allows instant command-line access to most types of Internet services, such as pages on the World Wide Web (WWW), FTP (File Transfer Protocol) sites and even email. We use this feature to create the Help links that connect you to the Internet.

The feature is only available, however, if certain library files and registry settings are present. These files and settings are, at this writing, only installed in full by the Microsoft Internet Explorer web browser. You don't actually have to use the Internet Explorer as your primary web browser, but it must be installed to enable command-line Internet access.

Internet Explorer is part of the Internet package that is installed with Microsoft Plus! for Windows95. It is also available directly from Microsoft as a standalone browser. You can get information about the Explorer and download the most recent version of it from Microsoft's home page at www.microsoft.com. It is also available at other sites on the Internet and from online services such as CompuServe and America Online.

Is the HTM extension associated with a browser?

A couple of our Help-to-Internet links launch your browser directly via an association with the HTM file type. For information on checking or creating a file type association, [click here](#) or search the WINDOWS.HLP file under the keyphrase "file types".

Zoom in. Automatically switches to the next lower screen resolution (viewport size). For example, if your current resolution is 1024 x 768, zooming in switches it to 800 x 600 (or the next lower resolution permitted by your card).

Zoom out. Automatically switches to the next higher screen resolution (viewport size). For example, if your current resolution is 800 x 600, zooming out switches it to 1024 x 768 (or the next higher resolution permitted by your card).

Switch Desktop. Switch to a different desktop size. If set to a size larger than your viewport, you can create a "virtual desktop" and pan to other areas of the desktop by moving your mouse past the edges of the screen.

Switch Viewport. Select a different viewport size. This sets the actual resolution for your display.

Pan Lock. When you create a virtual desktop, moving your mouse past the edge of the screen lets you view and use other areas of the desktop. This capability is called panning. If you want to "freeze" the currently visible portion of the virtual desktop, you can lock it into place by turning Pan Lock on. To set the lock, choose Pan Lock from the InControl Tools enhanced desktop menu, then choose On from the submenu. You can resume panning again anytime by switching Pan Lock off.

Maximize To. If you have a virtual desktop enabled, this item lets you maximize windows either to the entire desktop (the larger virtual screen) or to the viewport (the screen surface you can see at any one time).

Center To. If you have a virtual desktop enabled, this item lets you center Windows dialogs relative to the entire desktop (the larger virtual screen) or to the viewport (the screen surface you can see at any one time).

Fast Scrolling. If you have a high-powered display card, you can slow down the speed at which text or artwork is displayed when you use scroll bars.  How: From the InControl Tools enhanced desktop menu, choose Fast Scrolling, then choose Off (to slow scrolling) or On (to resume the default scrolling rate).

Shortcuts. Use this menu item to switch your hot key assignments on or off.

Popup Menu. This item lets you switch your enhanced desktop menu (this menu) on or off. When off, only the default Windows95 desktop menu appears when you click you right mouse button on the Windows background. To reactivate the enhanced menu, click the InControl Tools tray icon and choose Enable Popup.

Start Menu. This item lets you switch the popup start menu on or off. When off, you can still access the start menu in the normal manner (from the Start button).

Volume. Controls your system audio level. Use your left mouse button to drag the button on the slider up or down to increase or decrease volume. As you move it, the relative volume level is displayed on the button.

Screen Saver. If you have a screen saver active, InControl Tools lets you switch it on or off without returning to the Display Properties dialog.  How: Choose Screen Saver from the InControl Tools enhanced desktop menu, then choose On or Off from the submenu.

Arrange Icons. Contains commands for arranging icons on your desktop.

Line up Icons. Arranges icons in a grid.

Paste. Creates a desktop icon you that can be used to access the current contents of the clipboard.

Paste Shortcut. Creates a shortcut desktop icon that can be used to access the current contents of the clipboard.

New. Group of Windows commands that let you open new documents of certain types or create new folders or shortcuts on the desktop.

Properties. Opens the Display Properties dialog, the Control Panel dialog box that lets you see and modify your current display settings. InControl Tools adds property sheets and options to the default Windows95 Display dialog. To see the dialog now, click this button: 

Background. The "wallpaper" area of your desktop on which windows and icons appear. To click on the background, click on any area that is not within a window, icon or icon label.

Tray icon. The InControl Tools icon that appears in the tray on your Windows95 taskbar. When you click the icon with your left mouse button, a menu appears to let you exit InControl Tools, open this Help file, open the Display Properties dialog box or rerun the Setup Wizard.

Monitor Wizard. If, during installation, InControl Tools 95 determines that your monitor is not on the list of standard display types for Windows95, it runs the Monitor Wizard to help you determine the capabilities of your monitor. The results of the tests run by the Monitor Wizard are used by InControl Tools for dynamic Desktop and Viewport switching features.

Setup Wizard. The Setup Wizard guides you through the complete InControl Tools customization process. It is run when you install InControl Tools for the first time, but you can run it again any time by clicking the InControl Tools tray icon and choosing Setup Wizard.
