Story	

The player chooses to reign over one of two parties – the Templers, a Christian order of knights, or the Sarazens, an army of the arabic world. The mission, the units and the story of the game depend on the army chosen.

The Templers – campaign takes place between 1132 and 1147 AD and realistically reflects the European life-style of those ages. The mission of the player is to gather six sacred items of Jesus Christ by conquering different countries in Europe and the Middle East.

As leader of the Sarazens, on the other hand, the player takes over the role of an Egyptian warrior by the name of Baibars, who by the way really existed around 1255. His goal – fight the enemies occupying Islamic countries. In the Mediterranean area, he fights the crusaders and in Persia the Mongols.

For each campaign there are an administrative part and a battle part.

The administration, in which the player is concerned with military strategy, administering land and people and building new castles, plays like a conventional business-simulation.

Battles offer the player tactical maneuvers in real 3D atmosphere. This includes field-battles where two opposing armies fight until the last remaining soldier drops. Furthermore, the opponents castles have to be conquered by utilizing different aids and devices.

Even though, there are missions and levels to be completed, they may be accomplished randomly. This means, the player does not have to follow a particular order when completing the missions.

Flesh & Blood is more than a game; extensive and detailed research on real events and persons provide the player with a historical learning effect as well.
