**RE-WRITE HISTORY IN UBI SOFT ENTERTAINMENTS
ROAD TO MOSCOW**

LONDON - (September 5th 1999) ECTS – In the summer of 1941 the German High Command decided to launch the largest military operation of all time. In an operation codenamed “Barbarossa”, millions of German soldiers were sent into the cold, unforgiving heartland of Russia.

What the German strategic council didn't count on was the fighting spirit of the Russian Red Army. Standing strong in defending the motherland, and matching the Germans in both numbers and determination, the Red Army were not going to let the teutonic war machine simply steam roller over them. This was going to be a long and bloody battle....

And so the stage is set for the most infamous conflict of the 20th century as two of the mightiest armies ever assembled meet on the field in **Road To Moscow**.

Road To Moscow is a complex and highly realistic wargame designed on a scale never matched before, that lets the player take full command of some of the largest armies in military history.

- Assume the High Command of either army for a game of grand strategy : plan operations for all levels of command, from whole armies down to single companies.
- Test your mettle against the strategies of great leaders such as Hitler or Stalin.
- More than a traditional wargame, this game is designed as a complete military simulation;
- Draft orders to distribute to your armies just as a real commander would, following realistic chains of command and using official NATO symbols to represent your troops on real and highly detailed maps of eastern Europe.
- A hybrid between real-time and turn-based games, **Road To Moscow** uses a system known as **Interruptible Continuous Time**, removing the constraints of waiting for turn-completion while giving all the necessary time to plan and make decisions efficiently.
- The game uses a dynamic AI that will learn from its failures and make the game increasingly challenging as it strives to exploit the weaknesses in the player's strategy.
