

Jewels of the Oracle (TM)

Only one legacy remains of the civilization that inhabited the Fertile Crescent region before the Sumerians. People of extraordinary intellect, their pursuits were of the mind and not of conquest and farming. Preferring logical abstractions, they built a facility to train and practice their skills of logic and reason. Using technologies and ancient magic mankind has long since forgotten, they constructed devices of incredible ingenuity. Those who entered the domain of the Oracle and resolved the tasks before them achieved greatness. Those who failed...were lost forever. Their legacy, lost to the archaeological record, has been sought for millenia to no avail...until now.

Thank you for downloading the Jewels of the Oracle (TM) tour. This presentation gives you a glimpse of the mysterious world of the Oracle and some of the ingenious puzzles that lie on the path to greatness.

Jewels of the Oracle (TM) is a captivating game with a unique blend of strategy, mystery and fantasy--designed to entertain and fascinate game players of all ages. Also available online is a fully playable demo of the Horses of Asva puzzle, one of the many challenges in the game.

Look for the finished product in March 1995 with its stunning Grunge 3D (TM) graphics, immersive "first person" interface with over 10,000 frames of QuickTime (TM) animation and incredible music.

See if you can meet the challenges of the Oracle's puzzles...

Please feel free to distribute this tour, provided all readme files and copyright notices are included and unaltered.

This document contains information to help you get optimum performance according to your hardware configuration. Please read this in order to understand all the choices available to you before you launch the program.

Minimum configuration:

MPC
25 MHz 486SX or compatible processor
8Mb of RAM
SVGA video card/monitor with 256 colors at 640x480
8 bit sound output device
Windows 3.1 or later

Do not run any other program in the background while playing this game. You should not be running virus protection software or screensavers either.
