## PGS.MAN

### 1.1 Manual Errata

#### Manual Errata

While we strive to make our manuals as error-free as possible, there are always some errors and changes after a manual has gone to press.

#### Page Explanation

- 14: Para 1: PageStream format bitmap screen fonts are no longer used. The Compugraphic font engine is now faster and better so bitmap screen fonts are no longer required.
  - 51: Step 9: It is no longer true that 117% is the optimum view magnification for 12pt body text. (That was true in v2.2, but not v3.0.) The higher the magnification, the more readable the text, but 12pt type is quite readable even at Actual Size in PageStream 3.0.
  - 58: Step 3: Note that the text will remain highlighted after importing. Click in the text to deselect it.
  - 68: The grid commands are in the View menu, not Layout.
  - 94: Step 3: The text column frame will already be opaque, so you do not need to change this option.
  - 97: Step 2. The point for selecting text can be the same as the text column frame's top left corner, so you do not need to add 0.25i to each coordinate as explained in the text.
  - 100: Same as page 97. Just type: 'selecttext at 'p2d(click.x) p2d(click.y)
  - 120: The description for gadget A refers to gadget E; it should refer to D.
  - 162: The frameless text examples have an overset indicator which should not be there.
  - 171: The filter list omits ProWrite.tfilter which is used to import text from New Horizons' ProWrite.
  - 219: The Illustrator filter will not ignore charts and graphs as stated in the list; they will be imported as drawings.
  - 246: Para 1: Change 'Edit tool' to 'Object tool'.
  - 262: The first Flash Macro sidebar is incorrect. Change 'DuplicateTo-Page.rexx' to 'RotateAboutPoint.rexx'. The last word of the sidebar, 'PageStream', was cut off.
-

301: Canon: For some Canon printers, including the BJC-600, you must choose the Epson driver. Choose Epson from the Type popup and see if your printer is listed before choosing Canon.

301: Primera: This driver can be used with or without the dye sublimation option. The driver name (as listed in the Type popup gadget) is Fargo, not Primera. Choose Primera or Primera Pro from the Model popup. This driver has extra options specific to these printers.

303: Step 3: Change 'page 105' to 'page 305'.

383: Last para: PageLiner copies text to the clipboard in IFF FTEXT format only, not IFF FTEXT and IFF DTEXT.

387: Show Invisibles para: Change 'Settings/Options' to 'Settings/General'.

388: Path Preferences requester: The screenshot is wrong. There is just one path for dictionaries, instead of path and filenames for the individual dictionaries.

404: Conditional Break, Para 2: Choosing the Conditional Break command will toggle conditional break, not automatic kerning.

484: Para 1: Change '75x75 dpi' to '65x70 dpi' for PAL.

485: Set Grid: This command is in the View menu, not the Layout menu.

486: Set Guides: This command is in the View menu, not the Layout menu.

495: Style Palette, Para 1: Change 'Macro palette' to 'Style palette'.

524: Define character style tag: should be @Cname=[def]

527: The shortcuts for Send to Back and Send Backward are reversed.

#### Appendix A: Special Characters

00173: Macron: should be 00175

00222: thorn: should be Thorn

00254: Thorn: should be thorn

00254: y dieresis (ÿ): should be 00255 (Two 00254 entries were listed.)

00255: z caron: should be 00382

00337: oe ligature: should be 00339

00352: S caron: Ctrl C code is SV
