## Technical Specifications

### System 7 features

- Faster access to files and applications with Finder tools such as Find, the Apple menu, and aliases
- Publish and Subscribe functions for automatic updating of documents
- Support for Apple TrueType technology
- One-button installation

### PowerTalk features

- Serverless drag-and-drop mail on the desktop
- AppleMail letter application for complete entry-level mail capabilities, including support for text, images, video, and sound

### PowerTalk Mailbox

- View all incoming and outgoing mail using a universal desktop mailbox
- Sort In-Tray items by date, sender, recipient, subject, location, priority, read status, or user-definable tags
- Sort Out-Tray messages by subject, date sent, delivery status, or service account type
- Use deferred-sending option when not connected to your Macintosh network

### PowerTalk Catalogs

- Use the AppleTalk catalog to locate and access other PowerTalk users, AppleShare file servers, and shared volumes
- Create as many personal catalogs as you need
- Incorporate text, graphics, and sounds in your catalog items
- Create information cards that include user and group addresses, notes, and checklists
- Use the desktop browser for a consistent view of all shared catalogs
- View catalog entries by name or kind

### DigiSign software

- Provides commercial-grade electronic signatures
- Complies with the RSA Public Key Cryptography System (PKCS)
- Lets you sign documents by dragging and dropping them onto your DigiSign signer icon

### PowerTalk KeyChain

- Secures your PowerTalk mailbox, catalogs, and other services with one access code

### Special benefits for PowerBook users

- Handle mail efficiently and securely while traveling by taking your mail, catalogs and DigiSign signer with you
- Easily change your PowerTalk settings for work, home, or travel
- Automatically send outgoing messages when you connect to a network

### AppleScript features

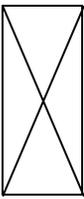

- Provides a consistent scripting language across all AppleScript-savvy applications
- Lets you automate repetitive tasks and develop custom solutions using system-level macros

### QuickTime features

- Enables you to play back QuickTime movie files
- Uses a cross-platform file format that lets Macintosh QuickTime files play back on Microsoft Windows systems using QuickTime for Windows
- Offers built-in ability to compress video, animation, and still-image files to a fraction of their original size
- Supports Kodak's PhotoCD format
- Lets you import audio files from CDs using an AppleCD 300 or 300i CD-ROM drive and add them to QuickTime movies using the standard file-preview dialog box from any QuickTime-compatible application
- Supports PowerBook systems that have 16-level gray-scale display

### System requirements

- Apple Macintosh or PowerBook computer with at least 4MB of RAM (5MB recommended)
- Hard disk

# System 7 Pro

## Features

### PowerTalk software

- Exchange mail with other PowerTalk users without a server or system administrator
- Exchange messages with others directly (using AppleTalk) via modem or through a PowerShare server
- Send items with a simple “drag and drop” of desktop icons
- Send a single document over multiple delivery mechanisms (fax, electronic mail, and so on) with a single command
- Receive mail from multiple sources in a single desktop mailbox
- Use PowerTalk catalogs to organize the information you refer to most often when collaborating with others
- Implement basic mail services with the AppleMail letter application, which supports text, images, video, and sound
- Protect your mailbox and other PowerTalk services with a single access code
- Use Digisign software to approve documents electronically
- Use PowerTalk-savvy applications to further automate and extend your messaging capabilities
- Obtain additional authentication and encryption capabilities with optional PowerShare servers

### AppleScript software

- Automate routine tasks
- Create custom solutions using off-the-shelf AppleScript-savvy applications

### QuickTime software

- Integrate video, animation, high-quality still images, and sound into reports, letters, spreadsheets, presentations, and other projects

System 7 Pro empowers you to work your best both individually and with others. By providing System 7, PowerTalk, AppleScript, and QuickTime software in one package, it helps you streamline your work and communicate with your colleagues more effectively.

PowerTalk allows you to correspond and work with others using built-in mail and collaboration services. Use your modem or an AppleTalk network to send messages of any type—including text, images, video, and sound—to other System 7 Pro users.

With PowerTalk, you can send an item from your desktop by dragging and dropping its icon onto an information-card icon for the recipient. You use this same simple method whether you're sending the item to other PowerTalk recipients or using personal gateway software provided by other vendors to reach fax or other electronic-mail destinations.

Incoming mail items arrive in a single universal mailbox directly on the Macintosh desktop. Items can be

opened, copied to folders, and otherwise manipulated just as you would any other desktop objects.

PowerTalk also lets you create catalogs of information that facilitate your collaboration with others, from simple address lists to collections of images or sounds.

The PowerTalk “key chain” lets you protect and access your mailbox, AppleShare volumes, and other services using a single access code. Commercial-grade electronic signature support is provided via PowerTalk's Digisign software.

AppleScript is a system-level “macro” language that lets any user invoke pre-scripted automated tasks with the click of a button. With AppleScript, you can use your favorite off-the-shelf applications to create powerful, cost-effective custom solutions.

QuickTime is Apple's industry-leading multimedia technology. It lets you view, copy, and paste video, animation, images, and sound as easily as you manipulate text.
