

Set sample offset

Where [9][x][y] means "play the instrument from offset $[x][y]*256$ ". [x][y] is a unsigned hexabyte value. If no sample is given, yet one is still playing on this channel, it should be retriggered to the new offset using the current volume. By example, 9-50 means "play the instrument from sample 20480 ($80*256$)".
