### Overview
3D Maze is a simple game to play! Start off from the blue square, find the red square and make your way back to the blue square! Simple!

3D Maze is a rare program; it's a genuine time-waster!

### How to play
When you load 3DMaze the view you get is a rat's-eye view down a corridor (or possibly a wall!). The commands available include:

| Action | Mouse | Keyboard |
|---|---|---|
| Move Forward | Fwd. Button | Up Arrow key |
| Turn Left | Left Button | Left Arrow key |
| Turn Right | Right Button | Right Arrow key |
| About Turn | Turn Button | Down Arrow key |

As you move about the maze, a message in the bottom right corner indicates whether you are getting 'warmer' or 'colder' (ie; closer or further away) with respect to the target square - follow this closely.

### Difficulty
You can change the maze you are in at any stage by selecting New Maze from the Options menu and then selecting the level of maze you wish to venture through. The levels, in order of difficulty are: Playable, Taxing, Unhealthy or Suicidal. The two numbers after then maze type are the relative sizes of the maze.

### Copyright
3D Maze is not free software. It is copyright. However; there is no charge for using the program for 20 days. You can give the program away for no fee but you must include this document with the main program.

If you like the program and would like the source code (written in C) send $15 to:
