Choosing the Printer

Written by Todd Carper

Aug 18, 1987

This note describes the correct process for changing printers

If while using 4D you decide to change the current printer, using Chooser, you must make sure that you also select Page Setup. The process of selecting Page Setup conforms to the warning message that is displayed when you change the type of printer being used. Failure to select Page Setup will most likely result in a system error the next time a print function is performed.
