#55   **Updating considerations using .res, .struct, .enum**

by Dave Terry   Published Date: February 3, 1988
_____

Updating copies of a database after adding a file
_____

One of the rules (pg 236 Command Reference) for updating a copy of a database is that you can't add files. If you
have added files and need to update a copy of the database simply go into the database to be updated and add the
appropriate files. Now the database can be updated with the new structure. There is still no way to update a
database after deleting fields or files.
