Keywords: NEXTSTEP, sendmail, mail

NOTE: The information provided in this document is for informational purposes only. The procedures and software described are not provided or supported by NeXT.

Overview

Sendmail 8.7.x is available on the Internet in compiled form for NEXTSTEP. This version is compiled for multiple architectures, supports NetInfo, NIS, smrsh, and outgoing aliases (YourName@host.com) with the user database.

The installation and use of this software is entirely at your own risk. NeXT has done no testing with this package and will not support it.

Procedure

The sendmail 8.7.x distribution is available at the following site:

`ftp://next-ftp.peak.org/pub/next/binaries/mail/sendmail-latest.tar.gz`

This will always point to the latest version of the sendmail binary distribution. It's compiled for Motorola 68k, Intel x86, Sun SPARC and HP PA-RISC. See the readme for additional information.

System/Network administrators will need to obtain a copy of GNU m4 in order to compile the new simplified sendmail configuration files.

The URL for **m4** is:

`ftp://next-ftp.peak.org/pub/next/binaries/proglang/m4-1.4.NIHS.bsd.tar.gz`
