

**PersonalINN** is a personal NNTP News-Server that fetches news from your ISP (Internet Service Provider) each time a PPP TCP/IP connection is made, and stores them on your computer so you can read them offline using any NNTP newsreader. It also allows you to post news, of course. It is based on the **INN v1.4** distribution but eliminating everything that is not needed for personal use, while incorporating other necessary software such as **slurp** and **rpost**.

**PersonalINN** comes precompiled in a handy NEXTSTEP package that installs with a double click. If you want to use the **inncheck** script to control the correct configuration of **PersonalINN** and you don't have **perl** installed on your computer, get yourself **PersonalINN.Pperl**, too. **PersonalINN** is described in full detail (some 30 pages) in **NEXTTOYOU 96/1** and **96/2** allowing you to really understand how it all works.

For those of you who are not able to understand German **PersonalINN** contains very brief English installation instructions. While I have tried to deliver all important information please understand that it is not possible to cover all aspects of a matter this complex in a short sketch. **PersonalINN** comes with a full set of adapted manual pages which should provide help in case of problems.

**NEXTTOYOU** is a German NEXTSTEP magazine published by the NeXT user group **WiNG** (*Wiesbaden NEXTSTEP Group*, **Keltenweg 1, D-65187 Wiesbaden, Germany**, **E-Mail: david@colossus.pfm-mainz.de**) to provide the NEXTSTEP community with a platform both for neophytes and professionals.
