

NGService

a NextStep NewsGrazer service....
written by Scott Anguish

Finally, even those NeXT users who don't use NewsGrazer can have full access to the RTF, and all enclosed documents.

NGService allows you to select text in any NeXT service friendly application, and view it as those of us who use NewsGrazer do every single day!

NewsGrazers unite! And for those who are not NewsGrazers, hey, you're welcome too!

Drop it in LocalApps or ~/Apps

Select your NewsGrazer Articles and go.

Bugs, Features and Additions

release 1.1

Fixed position of icon when dragging EPS and tiff files has been fixed.

There seemed to be a problem with copying folders. Fixed.

The decoding stage was not exactly what you could call... robust.
Fixed (thanks to Paul Verket for pointing this out!)

initial release (no version number)

When you drag a graphic object, the icon shows up in the lower left corner.
This is because I could not get the tracking to work right in a flipped view.

If you find NewsGrazer Posts that don't work, please mail me the entire

article.

I want to here from you.

Scott Anguish
