

# Global kOS Presents

The Digital Destruction Suite, Beta  
UY4 pre-release beta2

This version is "highly Dangerous" mostly in part to the fact that I enabled the fully functional "mass mailing routine" which like X-modem or something compresses the number of mails sent to the "same" individual. so that for each mail send from UY4, 10 or 20 mails are generated by the servers.

There has been "a lot" of press about this release and it seems everyone is interested in what exactly is happening with Global kOS and myself.

[UseNet thrashers guide](#)

# The Bible of mailbombing

This is a work in progress.

# Denial Of Service

The absolute guide to the "Methods" used

ex. The [Panther-Modern](#) attack, Syn's of the Network World.

This is a work in progress, so you will have to mind the lack of substance as I don't have the time to write it all out.

# We all Hate UseNet

**You know you do.**

here is the guide to making life miserable for everyone  
who feels the need to read NNTP news.

work in progress
