

Winamp recently consolidated its place at the top of the MP3 player tree with the news that the software is now freeware.

Download.com have registered almost 8 million downloads of WinAmp to date, so with

Sonique pulling in a paltry 2 million downloads, why bother? The answer? Style is everything as they say. Brown is the new black and that. Sonique is the MP3 player to be seen with this season! The top window of the sonique contains an animation which reacts to the music. Even if the built-in animations don't tickle your fancy, you'll doubtless find that one of the plug-ins available from the Sonique Web site will. It's not as functional as WinAmp, and certainly not as user-friendly, but your stylish MP3 files won't want to get out of bed for less than a Sonique.
