AccuTagger

The perfect addition to AddWeb!

Without META Tags, you have little control over how your web pages are viewed by search engine spiders. That means that when your pages get indexed by search engines, your description can look like junk and the keywords that might lead to your listing may have little or nothing to do with keywords you feel are important.

AccuTagger helps you create and manage META tags for your web pages. It supports all common, and many advanced tags, plus has support for custom tags as well. Managing and editing your META data couldn't be easier.

Download it at [FTP.CYBERHQ.COM](ftp://FTP.CYBERHQ.COM), or at WWW.CYBERSPACEHQ.COM/ACCUTAGGER

Nic O'Matic

Registering Domains Couldn't be Easier or Faster

Nic O'Matic is an application which takes the chore out of registering and maintaining domain names, hosts and contacts with the Internic. Until now, your options have been to fill out their text-file templates and mail them in, or to use the Internic's slow web site each time. Nic O'Matic allows you to quickly create registrations and auto-mails them to the Internic. Furthermore, it allows you to save defaults for future use (DNS Servers, contacts, etc.), and saves all work you do so that you can quickly and easily do modifications and deletions without any unnecessary time wasted.

As they say: Time is Money. Nic O'Matic is designed to save you time.

An ISP that registers or modifies an average of around ten domains a week will quickly find a savings of up to 2 1/2 hours a week... or 10 hours a month. Once again, Time is Money.

Download it at [FTP.CYBERHQ.COM](ftp://FTP.CYBERHQ.COM), or at WWW.CYBERSPACEHQ.COM/NICOMATIC

DeEnesse

DNS Server Suite for Windows NT & 95

Now running a DNS server under Windows NT or 95 is EASY! DeEnesse has taken the normally complicated concept of running a Domain Name Server, and made so simple that anyone can run it in minutes, and drastically cut administration time!

New DNS Administrators will find DeEnesse a breeze to learn. Experienced DNS Administrators will wonder why something like this has taken so long to appear.

Includes awesome DNS Manager, BIND 4.9.6 DNS Server, DNS Wizards, Internic Registration Utilities, NSLookUp, Traceroute, PING, WhoIs, Auto Cache Updating, Extensive DNS error checking, comprehensive documentation and much more... all in ONE APPLICATION!

Download it at [FTP.CYBERHQ.COM](ftp://ftp.cyberhq.com), or at [WWW.CYBERSPACEHQ.COM/DEENESSE](http://www.cyberspacehq.com/deenesse)

AddSoft

Shareware Subission for software developers

Shareware Authors have long dreaded the day of a release because of the countless hours it takes to submit their software to all of the shareware sites on the net. AddSoft fully automates the task with tons of sites... It E-Mails when a site wants submission via e-mail... it posts HTTP when a site has a submission form... It even uploads your program via FTP for shareware sites like TuCows, Simtel and others! Now the countless hours become just a few minutes!

Download it at [FTP.CYBERHQ.COM](ftp://ftp.cyberhq.com), or at [WWW.CYBERSPACEHQ.COM/ADDSoft](http://www.cyberspacehq.com/addsoft)
