What is shareware?

Shareware means that you can try software before buying it.

I allow you to use Icon-- for a 21 day evaluation period; if you continue to use it after the trial period because you like it (sure!) and because it suits your needs then you are requested to [register](#).

Shareware concept is good for every one because more developpers are encouraged to make more programs and you can try and buy programs you need for only a few money... so support me and the shareware concept.

Icon-- is not crippled or uncomplete so enjoy it!

You can share it freely with all your friends as long as you do not modify it and keep all the provided files.

Why registration?

Registration for Icon-- costs US\$5 (25FF).

Send in the registration form and a check in French Francs drawn on a French bank or alternatively you can use international postal money orders in US dollars to:

LEROUX Franck
24 Rue Thieullent
76310 SAINT-ADRESSE
FRANCE

You will receive a registration number in order to:

Avoid the shareware warning!

Be in your right to use as free upgrade future versions of Icon--.

Have a free technical support by mail for one year.

It's also a way for me to evaluate how people respond to [shareware](#) system, if I have to go on making *Nice Designed and High Quality Software* (!) for a very reduced price and to know how Icon-- is famous all over the world...

What is needed to run?

You will need the following files that are in the RUNTIME directory of this disk:

- VBRUN300.DLL MicroSoft Visual Basic 3.00 Dynamic Link Library
- THREEED.VBX MicroSoft Visual Basic 3.00 Controls

How to install?

This topic will assume you have already read the section [What is needed to run?](#).

Copy all the files of the ICON-- directory of your support disk on your hard disk in the directory you want (your tools directory C:\TOOLS for example) then in Program Manager, go to File/New and type C:\TOOLS\Icon--.exe, where C:\TOOLS is your tools directory for example.

If you have VBRUN300.DLL and THREED.VBX in your WINDOWS\SYSTEM directory, you do not need to copy them but if not you should copy them from the RUNTIME directory of your support disk to your WINDOWS\SYSTEM directory on your hard disk (where you will be able to share them with other programs written in Visual Basic) or to the directory you install ICON--.
