

Displays the speech engine's general settings.

Displays the speech engine's support for training the engine (for speech input engines only).

Enables you to edit how the speech engine handles the pronunciation of specific words.

Displays the engine's copyright and version information.

Helps you set up your system's audio to support speech input.

Displays the list of registered speech engines installed on your system. To access the settings for a specific engine, select the engine, then click the button for that setting.

Note: Selecting an engine in the list does not assign it as the default speech engine for your applications.

Enables you to edit how symbols, currencies, abbreviations, and numbers are pronounced by the engine (for speech output engines only).
