MAIL INSPECTOR 2000 VERSION 3   (c) by Marc Dürst (marcd@idev.ch)

Release Notes

NOTE: For release history see below.

ABOUT MAIL INSPECTOR
You can use Mail Inspector to check your POP3-Mailboxes in the background. Mail Inspector will show you a list of the waiting Email on the Mailserver(s). Because of that you don't need to have your Mailclient open the whole day (which needs really more resources than Mail Inspector ;-)). Please check our website regularlly to get the latest versions of MailInspector:

http://www.idev.ch/minspect

FEEDBACKS
If you have problems or if you found a bug please send me an E-Mail to support@idev.ch. Feedbacks and comments about Mail Inspector can be posted to our Guestbook or by voting for Mail Inspector at Supershareware.com (see button on the Mail Inspector Website: http://www.idev.ch/minspect).

TO-DO LIST
The following topics are on my To-Do list and will be done for a future version:

Next major version (3.2 or so):
• 	Filters for spam-mails
• 	Robots, like auto. save incomming messages to your harddisk or auto-reply etc.

Logterm (> V3):
• 	Mail Inspector will act as email proxy server
• 	Support for web-based email (eg. Hotmail, Yahoo, etc.)

HISTORY:

3.1.8	!	Fixed some weblinks within the application menu
3.1.7	!	Bug with wrong month in date fixed
3.1.6	!	Bug where passwort get corrupted at save/load fixed
	c	Add some more hint within the account-properties to make it more simple guessing what's an input for
	c	Renamed some of the labels within the account-properties to make things easier once more.
3.1.5	!	Bugfix where the interval was not load successfully.
3.1.4	!	Exception when loading configuration at start-up (did not occur all the time).
3.1.3	+	Configuring the mail client got much easier now: just choose one from the list like in Internet Explorer or enter it manually as in the past.
	c	Some new graphics and UI-things
	!	Bug fixed where an access violation occured when incomplete URL's where detected
	!	Bug fixed that attachements didn't got reset within the mail viewer when moving to the next one using the arrows
3.1.2	+	New HTML-Preview
	+	Enhanced status bar indicator
	+	Cancel-Button to cancel current POP3-operation
	!	Deleting mails within the preview fixed/re-enabled
3.1.1	+	Full expand of all levels when receiving new mail (also incl. on popup menu)
(beta 2)	+	Unread mails where shown in bold font, unread in normal font
	+	New column added: "Reply to" which shows the "reply to"- / "sender"-address
	+	Windows XP Style menus and toolbars
	+	Some UI change
	+	SmartFiltering
	+	Multi-column sorting
	+	Auto-Search
	!	If "from name" is empty the "from" field will be filled with the "from address"
3.1.0	+	Fully customizable columns (visible, order, sorting)
(beta)	+	Support for column grouping (multi-level)
	+	Saveing current view as HTML-, XLS- or Textfile
	+	New keyboard shortcut to reset entire UI-customization (Ctrl+F1)
	!	Fixed all the painting problems within the list of mails
3.0.17	+	Each account now can have it's own "color". This means that mail from a specific account will be listed in the account color.
	+	Account sequence can be changed now.
3.0.16	+	Maximum values for timeout increased to 322767 secs. - should be enough I think ;-)
	!	Bugfix where agent character name got reset fixed.
	!	POP3- and SMTP-logfiles get written again.
	!	Taborders in account properties
3.0.15	+	New option to "disable open/execute attachments".
	!	Default values for send- and receive timeout for new accounts set to 60 instead of 0
3.0.14	!	Some minor bugfixes.

3.0.13	!	MailInspector should now update the message list correctly even if only a few mails where deleted from a 3rd party program (or browser).
	!	Some UI changes / bugfixes
3.0.12	+	New password option (Configuration > Advanced) to stop starting Mail Inspector from people who where not allowed to read your mail. New button to lock Mail Inspector eg. if you leave your desk.
	+	Now there is an option when writing mail to send you a copy of this mail (sent as BCC).
	c	Loading message text in the email viewer is much faster than before. Also the caret is set correctly now.
	!	Hottracking for the main listview changed so it should solve various problems we had with this
	!	If no mail is selected when deleting no message will be displayed anymore.
	!	Some smaler changes and bugfixes in UI
3.0.11	+	SMTP Authentication (Username / Password)
	+	Customizable timeout values for sending and receiving (per account)
3.0.10	+	Attachments path get saved and restored (for saving/adding attachements)
	+	Menu and toolbar modifications get saved/restored (if they are valid for the current version of Mail Inspector)
	!	"Date" header get written now when MI sends out mail (incl. timezone etc.)
	!	Shortcut for MI traymenu "Check now!" fixed to F5 as it already was within the mainmenu.
3.0.9	+	Every "mail viewer" window how has its own taskbar button.
	c	Implementation of "Check only when online" totally re-written. Now it works like ICQ-NetDetect.
	!	Cancel button when sending mail now works correctly.
	!	Misc. minor UI-fixes.
3.0.8	c	Receiving mails internally changed back again to "non-blocking" mode
	!	Bug fixed in save email to disk
3.0.7	+	Email viewer can now save messages to .eml files on disk
	+	POP-Server and -port are now shown in the error message (-status)
	!	Bug fixed there list of emails did not get cleared
	!	Bug fixed with Up-/Down-Arrows in email viewer
	!	Bug fixed then selecting an Agent
3.0.6	+	Mails can be deleted directly within the preview window
	+	You can scroll to the next/previous message without leaving the preview window
	+	Some enhancements within the main listview where done: Show tool tips for cliped columns, hottracking, etc...
	+	Logfiles for POP3- and SMTP communication can be written (pop3.log and smtp.log within the Mail Inspector directory)
	+	When writing mail it can be sent immediatelly with CTRL+ENTER
	+	Now other Agent Characters than the one in your Windows folder can be selected (browsed). eg. the Office Assistants or characters which are located directly one the Web or Interanet (eg. "http://...../character.acs" or "\\server\shareddrive\character.acs")
	+	New enable checking feature to stop Mail Inspector checking for new mails in the background (temporary). Manual "check now" will allways check - doesn't matter about this setting.
	+	Mail Client configuration now supports command line parameters (eg. "....\netscape.exe -mail")
	c	Receiving mails internally changed to "blocking mode"
	!	Bug when deleting mails could lead in show/deleting wrong mails fixed.
3.0.5	!	Auto completion input control for "Mail Client" had some problems with files like xy.exe and xy.exe.1 - control replaced with a standard input control.
	!	"Check only when online" did not work with the new multi-account enhancement. Fixed.
3.0.4	+	Double click on the tray icon open Mail Inspector and checks for new mail immediatelly
	c	Keyboard Shortcut to check for mail changed to F5
	!	Agent selection box was empty on Win98
3.0.3	!	Maximum check interval increased from 15 mins. to about 22 days
	!	Bugfix where Mail Inspector generated a protection fault at the first start if the MS Agents are not setup correctly fixed - hopefully ;-)
3.0.2	+	Delay to check your mailbox the first time after starting MI can be configured.
	+	Agent Character now can be setup (from one of the currently installed characters on your system - incl. pre-view)
	+	Message viewer can now show detailed Information incl. the complete sourcecode of the message
	+	Message viewer now shows the priority
	+	Write message: Priorities are now supported
	+	Add weblinks to the Help menu
	c	Enhanced/Modified menu structure
	c	Reply's can now be sent within the message viewer so the original content gets "quoted" correctly
	!	Some smaller bugs fixed
3.0.1	+	Mails can be send out! (incl. Reply)
	+	New column "To" added.
	+	Popup-Menu added (right mouseclick).
	+	Installation procedure enhanced
	+	Installation procedure how detects running instances of Mail Inspector 2000 (V.3.0.1)
	c	Misc. changes on UI.
	!	"New mail" get cleared if the mailbox gets empty.
	!	List of emails updated if the mailbox gets empty.
3.0.0	+	Unlimited number of accounts.
	!	Fixed some bugs.
2.2.3	!	On some systems a "DummyForm" was visible. Fixed.

	!	Bug with the "New mail" notification fixed.
	!	In some cases (configurations) no sound was played. Fixed.
2.2.2	**+**	Portnumber can now be changed.
2.2.1	**c**	Some improvments for the Agent UI where done.
2.2.0	**+**	New "Agent" interface introduced (see File > Configuration > Show Agent)
	!	The "New Mail" popup window was shown every time the mails where checked. Now it behaves the same way as the sound.

LEGEND: **+** = Enhancement
c = Change/Modification
! = Fixed bug
