

# Java

## Invertire gli elementi di un array

```
import java.util.Arrays;
public class Practive{
    public static void main (String[] args)
    {
        int [] array = new int[] {23,45,34,54,67,78};
        System.out.println("Original array:");
        System.out.println(Arrays.toString(array));
        //reverse method 1:
        int i =0;
        while ( i< (array.length)/2){
            for (int j = array.length-1; j>i;j--){
                int tempf = array[i];
                int tempb = array[j];
                array[i] = tempb;
                array[j]= tempf;
                i++;
                System.out.println("Reverse array");
                System.out.println(Arrays.toString(array));
            }
        }
    }
}
```

## Stampare un array

```
import java.util.Arrays;
public class Practive{
    public static void main (String[] args)
    {
        int [][] array = {{3,4,5},{6,7,8}};
        System.out.println(Arrays.deepToString(array));
    }
}
```
