

# 0.7 Release Notes: PropertyEdit

Enhancements include the following:

## **- Error Checking**

PropertyEdit now informs the user of plist syntax errors. A panel appears giving line number and the file appears in the bottom text view with error highlighted. The user can then correct the error and use the refresh button to re-load the file, if other errors are found then the same cycle continues.

## **Fixed Bugs:**

### ***- Refresh***

Still needed more fixes here, you should now find it more reliable.
