

NEW FEATURES

v1.4

- * Dock levels are now loaded when needed, rather than all at once during initialization
- * New Preferences panel - gets rid of most of the dwrites
- * Added BackSpace "Set Password" menu item
- * Fiend Dock now remembers its position under different window resolutions
- * Fiend icons are now updated automatically when they are selected in the Workspace, or manually in response to an alt-click
- * Fiend now includes some items from the MiscKit, which contributed to the following new features:
 - multi-threaded app launches
 - an "Info->Show Menus" menu item
 - intelligently updated menus
- * Some new tricks

CLEANUPS

v1.4

- * All modal panels now have "Cancel" and "Ok" buttons
- * Selection of docked or shelved files in the Workspace is now documented
- * When you click an icon to select it in the Workspace, the Workspace now becomes the active app
- * Fixed some library loading options that prevented some BackSpace modules from being loaded properly

BUG FIXES

v1.4

- * Fiend crashes when an app that was launched from the command line (using a command without a forward slash) quits
- * Fiend doesn't remember the locations of persistent icons that have been moved unless the current dock level is the original "owner" of the persistent icon
- * Fiend crashes when a Dock level containing persistent icons is deleted
