

MiscArrowButton Release 3.0

If anyone has any suggestions, makes any enhancements, etc, or you just want to tell me how much you like/use/dislike it, feel free to email me.

Known Problems

(These problems are only experienced within Interface Builder.)

IBEditors

You can only double click on either the left or right title and bring up the editor under certain conditions. If the state is 0, then you can double click on the left side of the button and edit the contents. If the state is 1, then you can edit the altContents (the right side of the button). In the first release of this button, you could only double click on the left side, and it did not matter what state the button was in. NOTE: This is also broken in the current release. You can now only edit the left title. The workaround is to set the titles in the inspector.

I will fix this if/when NeXT makes the IBEditions API for subclasses of NSView public.
