MiscGaugeView Release 2.0 (OpenStep compliant)

This palette was the result of extending the GaugeView that came with the BusyBox example (used to be in /NextDeveloper/Examples/AppKit/BusyBox in the 3.x days). If you extend it, find it useful, or find a bug please let me know.

Known Problems
You cannot set the tick interval to be less than 1. Therefore right now you cannot have a gauge that has a range from 0-1.0 with an interval of 0.1. This will probably be fixed in some future release.
