Keywords: EOF, Sybase, interfaces, SybaseAdaptor, SybaseInterfacesFile, EOFSybaseAdaptor, InterfacesFileDirectory

Question

Q: My interfaces file for Sybase isn't in /usr/sybase but I'd still like to use EOF with Sybase.   I saw in the release notes where it suggests using a default to specify the new path for the interfaces file:

```
% dwrite SybaseAdaptor SybaseInterfacesFile path_to_interfaces_file
```

However I tried this and it still doesn't work!   What's the deal?

Answer

A: This feature was added for EOF 1.1, but there is an error in the release notes, the proper dwrite command is actually:

```
% dwrite EOFSybaseAdaptor InterfacesFileDirectory path_to_interfaces_file
```

Note that the path is the directory to the interfaces file, not the path for the file itself.   So if your file resides in /home/bob, the dwrite would only specify "/home/bob", not "/home/bob/interfaces".

Valid for: EOF 1.1, NEXTSTEP 3.2 Developer, NEXTSTEP 3.3 Developer
