

NEXTSTEP for Intel Processors

Title: Microsoft Windows Sound System

Entry Number: 1471

Last Updated: <<Date June 17, 1997>>

Product Vendor:

Microsoft

WWW: <http://www.microsoft.com/>

Keywords: Sound, Microsoft, Windows

Usage Commentary:

The Microsoft Windows Sound System plays and records up to 44.1kHz stereo under NEXTSTEP for Intel Processors Release 3.2. Data formats directly supported by hardware are 8-bit mulaw, 8-bit linear and 16-bit linear. This adapter card works in both ISA and EISA machines. The driver should also work with any card that is 100% compatible with Microsoft Sound System.

Setup and Installation:

This adapter card requires one DMA channel, an IRQ level, and a port address. To change the DMA channel and/or IRQ level, run the Configure application and then restart the computer to make the changes take effect.

Known Problems:

- Line input is not supported.

For NEXTSTEP Release 3.3, please see NeXTanswers document
