Overview

Because lomega Jaz disk require a custom disktab entry to initialize them, it is not possible to install onto them from the NEXTSTEP CD. However, it is possible to use the BuildDisk application and additional scripts to install onto a Jaz disk.

Solution

This document explains how to install the lomega Jaz Drive NEXTSTEP/OPENSTEP Install package (NeXTanswer 2153_lomega_Jaz_Drive_Package)

Be sure you are familiar with all of this information before you attempt to install the lomega Jaz Drive NEXTSTEP/OPENSTEP Install package.

Decompressing a .compressed File to a .pkg File

When you get the lomega Jaz drive Install package, it will be in the form of a compressed file. A compressed file has a .compressed extension and a distinctive icon. On a computer running NEXTSTEP or OPENSTEP:

- 1) Use WorkspaceManager to check the file icon or extension to be sure it is in compressed format (it will have a .compressed extension).
- 2) Select the file.
- 3) Double-click the file and WorkspaceManager will decompress the file (you can also choose File from the Workspace menu, then choose decompress from the File menu).

Installing NEXTSTEP/OPENSTEP on a Jaz disk

Follow the instructions in the README.rtf file in the Jazdisk.pkg to find out how to install NEXTSTEP/OPENSTEP on a Jaz disk.
