

# DBKit

**Title:** Sybase DBKit Adaptor Compatibility Patch

**Entry Number:** 2549

**Creation Date:** September 2 1997

**Last Updated:** September 3 1997

**Procedure Valid for Release:** OPENSTEP 4.x

**Keywords:** DBKit, OPENSTEP

## Overview

This patch solves the backward compatibility problem in OPENSTEP 4.x where DBKit applications give the following error when using the Sybase DBKit adaptor.

**Error loading /NextLibrary/Adaptors/SybaseAdaptor.adaptor/SybaseAdaptor**

**rld(): Undefined symbols:**

**dyld\_stub\_binding\_helper**

*The patch is a quad fat (m68k, Intel, HPPA, SPARC) copy of the NEXTSTEP 3.3 Sybase DBKit adaptor.*

**The Sybase DBKit Adaptor Patch consists of the files:**

2549\_SybaseDBKitAdaptorPatch.readme.rtf

2548\_SybaseDBKitAdaptorPatch.pkg.compressed

**Note:** You can get the patch from: <ftp://ftp.next.com/pub/NeXTanswers/Files/Patches/SybaseDBKitAdaptorPatch/>

## Installing the Sybase DBKit Adaptor Patch

Follow these instructions to install the *Sybase DBKit Adaptor Patch*.

1. Log in as **root**. (If you're not sure how to log in as **root**, see your system administrator.)
2. Make sure your computer is running *OPENSTEP Release 4.x*. (You can find the OPENSTEP version number with the Workspace Manager application's Info Panel command.)
3. Double-click the **SybaseDBKitAdaptorPatch.pkg** file.
4. Click the Install button in the Installer package window.  
An Install Package panel opens. Use this panel to select the same architecture and languages as you did when originally installing the *OPENSTEP 4.x User* software.
5. Click Install in the Install Package panel, and if prompted for confirmation, click OK to proceed.  
The Installer window displays information about the progress of the installation, which may take several minutes.
