

SMARTCODE HANDWEB

Web browser for Palm-sized PCs running Windows CE

Dear Customer,

To install the application, just double-click with your mouse on the accompanying SETUP.EXE program, and use the serial number below when you start HandWEB on your PPC:

141010-01000-321-07380

This is a fully functional version of HandWEB 1.0 that you may use freely for three weeks. At the end of the evaluation period you must purchase a license to continue using the product. This is not shareware or freeware, but a fully-supported commercial package.

You can use HandWEB 1.0 to surf a great majority of Internet Web sites, but due to the nature of the platform and the fast evolution of the Internet we cannot guarantee that it will support all sites. We have made every effort to make sure HandWEB supports the most-used services available on the Internet today, including search engines, password-protected and subscription sites, news, weather, etc. Please note that it does not yet support Java or Frames. Here is a summary of current HandWEB 1.0 features:

- Connects directly to your regular Internet Service Provider
- Offers both text and graphic-mode browsing (displays GIF and BMP images)
- Loads locally-stored HTML pages
- Includes intuitive navigation buttons
- Supports Cookies and basic authentication
- Handles Web sites with fill-in forms (such as searches), pull-down menus, and more
- Optionally uses Proxy servers
- Lets you customize your own list of bookmarks for fast access to frequently visited sites

The user documentation is currently provided in CHM (Compiled HTML) format, which requires MS Internet Explorer 4.0 to be installed on your system. If you do not have IE 4.0, you may read the accompanying User Manual in Adobe Acrobat format.

We trust that you will be satisfied with the performance of this software, and look forward to hearing your comments. Please contact us if you need help or more information.

Sincerely,

A handwritten signature in black ink that reads "Michael Modjeski".
