Step-by-step procedures

The topics below provide step-by-step instructions for working with the Menu Bar editor.

[Adding a menu bar resource to a book](#)

[Assigning a menu bar resource to a viewer](#)

[Changing existing ToolBook menus](#)

[Creating and editing a menu bar resource](#)

[Editing a menu bar resource](#)

[Exporting resources](#)

[Getting information about a resource](#)

[Importing a resource](#)

[Overview: Resources](#)

[Removing a menu bar resource from a book](#)

[Removing a resource](#)

[Replacing resources](#)

Map of screen elements

Click the Menu Bar editor screen below to display descriptions of screen elements.

The screenshot shows a window titled "Menu Bar Editor - Untitled" with a menu bar containing "File", "Edit", "View", and "Help". The main area contains several input fields and checkboxes for configuring a menu item. The "Menu Name" field is set to "Exit". The "Menu Alias" and "Help Text" fields are empty. The "Accelerator" section has a text field with "F4" and a dropdown arrow, with checkboxes for "Shift", "Ctrl", and "Alt" (the "Alt" checkbox is checked). The "Initial State" section has checkboxes for "Checked" and "Disabled". Below these are "Move Item:" controls (left, up, down, right arrows) and buttons for "Insert", "Separator", and "Delete". The "Menu Bar Items:" list shows a hierarchy: "File" (indented), "- Open" (indented), and "- Exit" (indented and highlighted with a black background).

Menu Name

Specifies the text that you want to appear as menu and menu item names.

To use one of the letters in the menu or menu item name as a mnemonic access character (or DAM key), type an ampersand (&) before the letter. For example, if you type "Te&xt," then "x" is the mnemonic access character for the Text menu. To have an ampersand appear in a menu or menu item, use two ampersands (&&).

To add a separator bar, do not type any text.

Menu Alias

Specifies the message that ToolBook sends instead of the menu item's name when the user chooses that menu item.

Help Text

Specifies the text to be displayed in the status bar when the menu or menu item is clicked.

Accelerator

Specifies the key you want to use as an accelerator for the menu item.

Initial State

Specifies if the menu or menu item is disabled or if a checkmark is displayed next to a menu item by default.

Promotes the selected menu text.

Demotes the selected menu text.

Moves the selected menu text up in the list.

Moves the selected menu text down in the list.

Insert

Adds a blank menu or menu item before the selected menu text.

Separator

Add a separator bar before the selected menu text.

Delete

Deletes the selected menu text.
