

Cipher 3.0

By Brad Trupp (c) 1992,1993

Cipher 3.0 is a shareware game. Please register.

How to Play

The object of Cipher 3.0 is to solve the puzzle by selecting letters from the alphabet and placing them into the correct places on the puzzle. As you place letters into the puzzle, the new and old letters will be interchanged throughout the puzzle.

Registering Shareware

Support Shareware. Register this game for the cost of postage.

Just send me a picture postcard of your town or city.

Please indicate which program, including the version number, that you are registering and where you found this program. Any comments you may have are always appreciated.

You may also choose the alternative registration method. For \$10. (yes! That's only ten dollars.) you will receive the newest version of Cipher and other shareware programs. Payable in either US or Canadian funds. Money Orders or Checks please.

Send to:

Brad Trupp

Winnipeg, Manitoba
Canada, R2M 4X6

A small note

Since I started asking for the postcard registration with version 1.2 of Cipher, I have received a great deal more postcards than I ever expected. Thank you to all those who have registered the earlier versions. I have received cards from all over Europe and North America. I would encourage other shareware writers to do the same. Part of the thrill of writing shareware software is finding out where your programs end up.

Cipher has been found in many on-line systems, in shareware catalogs, and has been included in several commercial shareware collections.

If anyone wants to license Cipher (under a non-exclusive distribution license only) for inclusion in any commercial offering, please contact the author at the above address.

Revision History

Version 3.0 May 1993

- ... Increased the number of puzzles to around 1400.
- ... Added the option to show or hide correct letters in the puzzle.
- ... Added the ability to start at any puzzle.

Version 2.0 December 1992

- ... Increased the number of puzzles to 100. If you have played the earlier versions of Cipher you will find that the puzzles are a mix of new and old puzzles.
- ... Fixed the strange memory error that caused version 1.2 to slowly eat up all the available free memory under Windows 3.1. Oops!
- ... Added a proper HELP file. (which you are now reading)
- ... Now stores Cipher20.ini in the Windows directory instead of program's current

directory. The Cipher20.ini file is where the program keeps track of which puzzle you are at.

Version 1.2 February 1992

... Increased the number of puzzles to 60.

... Changed the shareware registration from \$\$\$ to a postcard.

Version 1.1 January 1992

... Original version.

The Legal Stuff

You may distribute this software as long as the following files are included:

CIPHER30.EXE

CIPHER30.HLP

CIPHER30.DAT

All the above files must be combined into a single file ZIP or other compression format for distribution.

Beyond a fee for the reproduction and media cost, no fee may be charged for distribution of this software.
