

AGNS- A Game of Naval Strategy **Evaluation Version Readme**

Evaluation Version

The evaluation version you have installed is a fully functional rendition of **AGNS - A Game of Naval Strategy**. In the evaluation version, certain limits have been incorporated. Specifically, the Game Size has been limited to "Small" and the Game Level has been limited to the first two levels. When you register **AGNS** you will receive a release code that will remove these limits.

Install Log

The installation program creates an install.log files in the directory you selected for installation. This file list all the files that were installed and is used by the uninstall program.

Shared Files

The installation program installs the following files in the Windows\System directory if the current version in Windows\System is older that the version in the installation program.

- *THREED.VBX (4/28/93)
- *GRID.VBX (4/28/93)
- *PICCLIP.VBX (4/28/93)
- *CMDIALOG.VBX (4/28/93)
- *COMMDLG.DLL (3/31/94)

Files above marked with an asterisk (*) are also copied to a sub-directory (WinSys) off the directory you specified for the program installation. We do this because some user's can experience problems with shared files in the Windows\System Directory. If you experience such problems, you can copy files from the WinSys sub-directory to the directory where **AGNS** is running. This will usually correct the problem. If you do not experience any problems, you can delete the WinSys sub-directory.

File VBRUN300.DLL is not supplied with this installation. If you do not have this file, you will need to down load it from the service where you obtained **AGNS**.

Known Problems with Shared Files

Microsoft has reported a know problem with THREED.VBX which is detailed in their document number Q111296 available in the Microsoft Knowledge Base on CompuServe. File THREED.VBX should be size 64,544 bytes. If your experience problems with THREED.VBX, first check the file size in your Windows\System directory. If it is not 64,544 bytes, back it up and replace it with the correct 64,544 byte file supplied with the **AGNS** installation program. You should also use "File Find" to determine if there are other copies of THREED.VBX on your system that may be causing a problem.

GRID.VBX can be a problem for some users. According to Microsoft, Version 3.00.0537 (44,656 bytes) is the correct version.

Color

Images included in **AGNS** are 256 color. You can run **AGNS** in 16 color mode.

Uninstall

To uninstall **AGNS**, simply click the Uninstall icon in the **AGNS** Program Group. After running Uninstall, files that were replaced remain in the Backup directory (assuming you selected the backup option). These can be restored at your option.
