[What is New](#)

Installation

Simply copy all files to a new directory of your choice. Read the important [Legal](#) information before use.

The application is qchart.exe. It works when you select a file of the name "master" (no extension) from the File > Open menu. All CompuTrac and MetaStock data are indexed via files of the name master.

sample.zip is a sample of three stocks in CompuTrac/MetaStock format for those who do not have data in that format yet but wish to give QuickChart a test drive. Suggested use is to create a new directory anywhere, move sample.zip to it, unzip and delete sample.zip. The result will be files: f1.dat, f1.dop, f2.dat, f2.dop, f3.dat, f3.dop and master. When you launch qchart.exe do a File > Open on the master file. That's it!

File menu commands

The File menu supports most recently used files. You need to open a file of the name "master" (no extension) to load a data series.

View menu commands

The View menu offers the following commands:

Options

The Options let you adjust the visual aspects of the chart via a dialog box.

You can select 0, 1, or 2 moving averages which can have their lengths set.

The displayed (and printed) bar settings can be set. The bar spacing does not change with window resizing as is typical of comparable applications.

The choice of showing the data's volume can be made.

The choice of ignoring bad or inconsistent data can be made.

The color scheme can be changed by expanding the dialog box. Color changes only take effect if the dialog box is closed with "OK" while it is expanded.

For all Option items, the preferences are automatically written the qchart.ini and thus persistent across sessions.

Slideshow

The slide show progresses from the first chart to the last at an interval you define via a dialog box. The chart sequence does not wrap-around. The right mouse button popup menu is disabled while in Slideshow.

Slideshow may be exited at any time by hitting Escape.

Slideshow may be paused and resumed at any time by hitting Space Bar.

Select menu commands

The Select menu offers the following commands:

<u>Next/</u> <u>Previous</u>	These two commands move to the next or previous chart, respectively. Note that the arrow keys may also be used for this.
<u>GoTo</u>	This command permits random access to the charts. Three sorting modes are supported - the most recently chosen mode is persistent across sessions.

Use and Navigation

This application permits quick and easy viewing, printing and navigation for financial data stored in MetaStock or CompuTrac format. QuickChart works when you select a file of the name "master" (no extension) from the File > Open menu. All CompuTrac and MetaStock data are indexed via files of the name master.

Toolbar buttons, arrow keys and a right mouse popup menu enable navigation among the charts.

The viewed chart may be printed. The toolbar button launches a Print Preview. Bar spacing is WYSIWYG between screen and paper.

QuickChart will display about three and one-half years of historical data.

Refer to the [View menu](#) and the [Select menu](#) topics.

Other ShareWare Applications by the Author

MetaFix

MetaFix permits you to modify the disk files for MetaStock or CompuTrac format data including:

- editing a single quote
- adjusting a quote series for a split
- adjusting a quote series for Price or Volume multipliers
- deleting a quote
- displaying underlying facts about a quote series
- automatically scanning for potential splits

No files are ever deleted - any edited .DAT file is first saved with the extension .BAK. This is unlike comparable applications! Also, the automatic split-search is unique and provides suggested split ratios for both forward and reverse splits.

MetaFix is small and fast - an alternative to competitive financial fatware.

FullDisk

FullDisk permits quick and easy profiling of the contents of a local or network drive. Menu selections permit:

- rescanning as needed
- choosing the units for display results (bytes, kilobytes or megabytes)

When launched, FullDisk searches your drive for all sub-directory trees and the file sizes therein starting with the currently selected drive. A color-coded list box shows the results and a pie-chart depicts the usage within that tree / drive.

Registering

QuickChart is distributed as Shareware. It is not free or public domain. This means you may copy and distribute it freely but should you find it useful and use it beyond an initial evaluation period of 30 days you are obliged to pay the license fee.

The single user license fee is US\$20. More is accepted if you find this software of superior value!

You can register this program by mail. Cash or checks/cheques can be accepted in any major currency, equivalent in value to US\$20 per copy. Cash is preferred. Please use the [Shareware Registration](#) form.

Registered users will be sent a registration number to disable the reminder box. This number will be good for all subsequent Shareware versions of the program that may become available.

If you enjoy this software, do the decent thing and register!

I would be pleased to receive any comments, bug reports or suggestions for future releases. I may be contacted by e-mail at pgerhart@voicenet.com.

Registration Form

Print this form and send it with your remittance to:

Paul Gerhart
101 Magella Court
North Wales, Pennsylvania
19454 USA

Please give an e-Mail address if you have one so I can inform you of your registration code as soon as I receive your order, and give timely information on upgrades.

QuickChart Registration Form.

I wish to register ____ copies of QuickChart.

I enclose a check for \$US_____ (\$20 per copy)

I enclose cash for \$US_____ (\$20 per copy)

Name(s) _____

Company _____

Address _____

Code _____

Country _____

E-Mail _____

Where did you obtain QuickChart from? _____

It would be helpful for me if you could tell me how you use the program. I can then use this information when planning new features for future versions. Also provide any comments/suggestions.

Thank you!

License

You should carefully read the following terms and conditions before using this software. Use of this software indicates your acceptance of these terms and conditions. If you do not agree with them, do not use the software. All presumption of warranty is disclaimed - see the [Disclaimer of Warranty](#) for the specific language.

You are hereby licensed to: use the Shareware Version of the software for a 30-day evaluation period; make as many copies of the Shareware version of this software and documentation as you wish; give exact copies of the original Shareware version to anyone; and distribute the Shareware version of the software and documentation in its unmodified form via electronic means. There is no charge for any of the above.

You are granted a limited license to use QuickChart, to copy and distribute it, provided the following conditions are met:

1. No fee may be charged for such copying and distribution other than actual costs incurred, except for a nominal distribution fee.
2. QuickChart may ONLY be distributed in its original, unmodified state, complete with data files and this documentation.
3. QuickChart may not be distributed as part of a package or group of programs.
4. The paid registered version may NOT be distributed.

What is New in 2.3?

Improved

Dial Data makes a less-than-ASCII .DOP file - not nice. Version 2.3 tolerates their faux pas.

Fixed

Fixed bug where close was shown instead of volume.

Fixed this Help file which incorrectly stated that ctl3dv2.dll was a requirement.

Changes in Version 2.2

Added

Ability to handle data series without the .DOP file. (Thanks, Denis.)

Ability to ignore bad or inconsistent data.

Improved

Removed limit of 127 per master file.

New registration encoding.
