

Baseline Known Issues

Try not to dismount a volume that is currently being scanned.

Only entire volumes can be scanned.

Trashcan state reflects known state from baseline. Baseline does not receive live updates when items are trashed in the Finder.

Volume stats still seem to be stale.

Odd sqlite related crashes at startup.

Elapsed time does not tick quite often enough.

Tooltips don't appear in the Browser view.

Baselines could be mmap'd for greater efficiency.

Some operations (e.g. resetting a scan) could do with a touch more optimisation.

Multiple items cannot be selected.

TreeMap doesn't redraw correctly very occasionally.

Treemap blocks sometimes don't go right up the edge of the parent.

Hard linked directories are counted multiple times.
