

GetRight® Mail Control Help

www.GetRight.com

The GetRight Mail Control will allow you to start downloads on this computer in GetRight from anywhere you can send email. You will just send a simple email to an account you select.

[Mail Message Format](#)

[Advanced Stuff](#)

[About](#)

Mail Message Format

The email sent must just have the Subject that starts with "GetRight Get:" (without the " quotes) and then the URL GetRight should download.

For Example:

GetRight Get: <http://www.getright.com/setup.exe>

The email message must also be sent from one of the allowed "From" addresses.

Advanced Stuff

No Tray Icon

You can set the GetRight Mail Control to run without showing any tray icon or any other status window. Of course if you do this, there isn't any way to control or view it without doing Ctrl+Alt+Del and ending it and then restarting it with a tray icon. But if you're doing this, you likely know what you are doing :)

Add **/NOTRAY** as a command line item in the shortcut in the Startup group.
