# MiniApps

## MiniApps

MiniApps brings you twenty five useful applications, all in one install.

### Alarm

lets you set up to six alarms in a 24-hour period.

Each can play the sound of a ringing telephone, one time, seven times, or continuously and display a customizable message when it goes off.

You can choose color, position and save.

You can also set quick alarm, configure it to go off in one to 99 minutes from current time.

Double click Alarm and select Help from Menu for more help.

### AlphaBook

Click F1 or Help\Help to read about AlphaBook.

AlphaBook saves contents of A to Z and 1 to 3 in 28 RTFs,

All 28 RTFs are saved in the AlphaBook directory, named Alpha(\*) .rtf, where \* is the button names A to Z and 1 to 3.

e.g: AlphaA.rtf, AlphaZ.rtf, Alpha2.rtf.

Type any word in the upper text and it will automatically scroll to the letters you typed, click Find Next or F3 to find next.

Click File\Sort Alphabetically to sort text in alphabetic order.

Click Buttons\Change Button Name, to change buttons 1, 2 and 3.

### AttriBat

If you restore a backup from MS-DOS, then files that have the Read-Only, Hidden and System attributes will not be restored from backup unless you set their attributes to Normal.

That is also true if you use a DOS unzipping software, they have switches to restore Hidden, Read Only and System but will not overwrite a Read-Only file or folder.

AttriBat.exe will search the hard drive for files and folders that have Read-Only, Hidden and System attributes and make 2 batch files.

Click Help\Help or F1 in AttriBat for help.

### BlockIt

Win95 only.

BlockIt doesn't work in NT, it can't block the Ctrl+Alt+Del in NT.

Once activated, it suppose to cover the whole screen including the Task bar.

Ctrl+Alt+Delete, Alt+Tab and Escape wouldn't work.

While BlockIt is on, if you restart computer by turning the electric switch off then it will come back on and cover screen.

To be on the safe side, backup registry first because if you got locked out then you will not be able to get in unless you delete the Lockit.dat in the BlockIt directory from the Command Prompt Only or restore from a Registry backup.

Once you execute it, double click or right click the gray area and

select Exit if no password already selected, otherwise you have to enter password.  
To block computer you need to enter password, double click or right click gray area and select Change password, you will be prompted to enter old Password, click OK if no old password exist, you will be prompted again to enter new password, there be sure to right down password and enter it (case sensitive).  
If you forget password then you will be left out unless you restore as explained above.  
Suggest to use a simple password to start with.  
If you forgot password, BlockIt will let you in the first 10 uses, after three times entering password.

Don't worry about it as long you know the password or you didn't enter any passwords and remember to double click the gray area.  
I would print the above before executing it.

### **Calculator**

Is a simple Calculator that views calculation in a scrolling window.  
Click Help\Help or F1 in Calculator for help.

### **Calendars**

There is two calendars supplied, take your pick.

When browsing other months or years, it doesn't change the computer date, contrary to the Calendar supplied with the operating system, which could get you in trouble if accidentally it changed the computer month or year without noticing it.

**Click** on the **year** or **month** to select other years or months.

### **ChangeRes**

Change resolution was made because the old Change resolution found in the web doesn't work in Win98.  
To change Video resolution, depends on font used, video card and resolution used, a computer restart is not always necessary.  
If you see that ChangeRes requires a restart for every resolution change then ChangeRes is not the best one for you to use.  
Look for a different one, each behave differently.

### **Color, RGB Color Converter:**

Read color values.  
Click Help\Help or F1 in Color for help.

### **Drive Info**

Select from Combo Box to get summary of each drive, drive info supports up to 12 hard drives.

**Note:** This is a new DrvInfo, old DrvInfo that uses MsChart discontinued, MsChart.ocx no longer needed, you can delete it from the Windows\System directory if not used by other applications.

There are two Drive info now:

- Drive Info 95, is for Win95 that recognizes hard drives less than 2 GB in size.
- Drive Info 95b+, is for Win95/98/NT that recognizes hard drives larger than 2 GB

in size.

One day I will try to combine them together.

## **Files Inventory**

Files Inventory is made so you can have files in a directory saved in a text or printed.

Simply click browse to the directory, select to list in 2 columns or with date and size and click the List Files button.

Once listed select File\Print or File\Save As to save it in a text.

## **IcoView**

What makes IconView better than any icon viewer is, when you click the selected icon it views it in the Taskbar and the Systray. Also you can view all icons in a directory.

Icons looks different if viewed in the Systray, Taskbar selected or Taskbar not selected.

Click Help\Help or F1 in IcoView for help.

## **IcView**

IcView is different from IcoView.

IcView is a mini single icon viewer, select Associate IcViewer from MiniApps in the Startmenu, browse to Icview.exe then click Create Association.

Any time you right click an icon, there will be a View option in the context Menu.

## **LFN Backup and Restore**

Unless you know the LFN(long file names) for every SFN (short file name), its impossible to guess what the original Long file name is unless you have a backup that have stored both DOS SFN and Windows LFN of each file and directory, also knows what the original path, then it can be restored from backup to the original path by renaming the SFN to LFN. Click Help\Help or F1 in LFN for help.

## **Make Shortcut**

It makes shortcuts to programs anywhere.

Shortcut recognizes non English installed Win95/98/NT operating system and makes shortcut to them.

Click Help\Help or F1 in Make Shortcut for help.

## **Move**

Don't under estimate this little utility, it moves large folders, mutli files and folders.

After installing MiniApps, execute it so it will put the Move in the Context Menu.

Any time you want to move file(s) or folder(s), select file(s) or folder(s) and right click them, select Move.

There you can select to move selected files or folders or just copy only.

Also there is an option to make a new directory.

If you have Win98 or IE40 installed, you can use Move to manipulate the StartMenu, right click any item in the StartMenu, select SendTo then Move.

In Move, browse to the destination directory, destination path has to appear in the "To" window.

#### Network:

Enter Computer name and drive letter and click the Network button, it will connect the local computer to the Network drive.

In the "to" window, network path has to be a UNC path,  
e.g.

\\computer name\drive letter(no Collin)\Directory name if any.

\\Joe\c\Misc

Don not try any other way, it will not work.

Or select the mapped drive from the Drive selector and it will automatically retrieve the UNC path and connect to the Network computer drive.(don't click the Network button so you can browse through the mapped drive).

Transferred path has to be in UNC format using the actual physical drive letter name.

Don't click the Disconnect Net button, unless you are having network connectivity problems or want to disconnect from the other computer drive.

### **MyNotes and MyNotes Lite**

MyNotes, MyNotesL and MyNotes Lite.

MyNotes have 15 pages to save notes in, MyNotesL opens the first two pages of MyNotes for quick open.

MyNotes Lite is a lite version independent on its own, have two note pages to save notes in.

Click Help\Help or F1 in MyNotes or MyNotes Lite for help.

### **OCX Fix**

To be used if you get errors that the OCX is not registered correctly.

Click Help\Help or F1 in OCX Fix for help.

### **Open**

Click Open, to browse and open any program you like.

### **Open Folder**

Opens any folder.

It has been improved Dec 7, 1998

### **US Area and International calling codes**

Type any state name or area code number in the upper left window and it will scroll down to the country or area code of that state.

Click the Country button, type any of the World's country name or country number in the upper left window and it will scroll to the country.

### **Sort Lines Alphabetically**

Sorts text lines alphabetically

Click Help\Help or F1 in AlphaSort for help.

### **SubInfo**

SubInfo, stands for "Submission Information"

Stays on top and saves all your personal, shareware or company info. It saves you from having to type info every time with the possibility of making mistakes.

Once you have entered all information in SubInfo, clicking the button copies the content of the corresponding text to the clipboard, all you have to do is paste it in the submission form.

Click Help\Help or F1 in SubInfo for in detail instructions.

With the new SubInfo version 2.0, you can save information on many programs or person's information in one SubInfo.

Click "Prog" in the menu and select "Add Program", give it a name then it will prompt you for an icon if you wish to change icon for each program or person info..

### **Resources and Swap file Meter(RSFM)**

#### **Resources Monitor, Clock and a Calendar (RM)**

You can get rid of the clock in the Systray using the Resources Monitor. RM is a very small utility, sets OnTop viewing the time and monitor resources.

RSFM shows free System, User and GDI resources, gages will turn yellow if free resources becomes less than 34% and turn red if drops below 16%.

Also shows SwapFile usage which is the percentage of the swap file Win386.swp size compared to the free hard disk space the file is located in. Shows size of the Win386.swp file and the percentage of the free drive space.

Right click Resource Meter and select Help for more info.

### **Stay On Top**

Click Options\Release Stay On Top to release from being on Top.

Click Options\Double vertical to view two vertical pages.

Click Options\Double horizontal to view two horizontal pages.

Click Options\Single page to view a single page, it will retain text in the hidden text window until you clear it.

Click Options\Insert line marker or Options\Remove line marker.

"Open to Page 1" or "Save As Page 1"

Opens and saves Text or RTF files to the first text window which is the main page, the top one if showing two horizontal pages and the left one if showing two vertical pages.

"Open to Page 2" or "Save As Page 2"

Opens or saves Text or RTF files to the second text window which is the secondary page, the bottom one if showing two horizontal pages and the right one if showing two vertical pages.

### **Task Scheduler**

Run tasks at schedule time and day, also works as an Alarm with built in sound. Please click Help\Help in the Task Scheduler for more.

**Win98 Config**

Win98, Win95 OSR2b, Win95 OSR2c and Win95 with IE40 installed  
tips and bug fixes.

Click Help\Help or F1 in Win98 Config for help.

**Y2K**

All programs are Y2K ready

## THE LEGAL AGREEMENT

### NO LIABILITY FOR CONSEQUENTIAL DAMAGES

In no event shall the publisher, the author, nor their suppliers be liable for any damages whatsoever (including, without limitation, damages for loss of business profits, business interruption, loss of business information, or any other pecuniary loss) arising out of the use of, or inability to use this product, even if being advised of the possibility of such damages.

Although some state jurisdictions do not allow the exclusion or limitation of liability for consequential or incidental damages, the above limitation still apply to you. It is your responsibility to read the readme.txt file before installing.

## **Install, Reinstall and Uninstall**

Win/95/98/NT/2000

### **Notes:**

If you have a command line in the Autoexec.bat to delete Win9x temporary files in the C:\Windows\Temp upon startup then the VB6run update will not take affect if it prompts you to restart computer because the computer DLLs are outdated.  
Remove the line from the Autoexec.bat when you are installing programs that requires a reboot.

### **INSTALLATION**

There are two zip files in Miniapps.zip:

The VB6run, unzip it to a temporary directory and install it by running Setup.exe.

Then unzip miniappsu.zip to another temporary directory and install it by running Setup.exe.

### **REINSTALL**

Unzip miniappsu.zip to another temporary directory and install it by running Setup.exe.

Select the "Reinstall" button if you are reinstalling to a previous installation.

Take care to see that the correct path to the previous installation is shown in the path window.

When reinstalling, don't delete the previous {older} MiniApps directory. Merely selecting the "Reinstall" command, it will update and replace all files and recreate any missing folders.

### **UNINSTALL:**

To remove {uninstall} MiniApps, run the "Uninstall Unwanted Programs" found in the MiniApps shortcut in the Start Menu and click the Remove All button.

### **UNINSTALLING the VB6run version:**

#### **NOT RECOMMENDED**

To Un-install, go to the Control Panel\Add Remove Programs, scroll down to the VB6run and click uninstall.

If you uninstall the VB6run, then you can't run programs programmed with Visual basic, suggest strongly to keep it installed.
